22

23

24

25

All right. Welcome to the public information and environmental scoping meeting for the proposed Sherco Solar Project. My name is Scott Ek. I am an energy facilities planner with the Public Utilities Commission, the Minnesota Public Utilities Commission. And let's see here.

The purpose of tonight's meeting is to provide information about the proposed project, answer questions about the project and the permitting process, and receive comments on topics for potential consideration in the environmental assessment that will be prepared for this project. That's part of the permitting process. So the meeting will proceed with me providing a brief summary of the permitting process, the state's permitting process, and the state's role in that process, followed by a description of the project by Xcel Energy representatives. And after that there's a summary of the environmental-review process, and that will be by Mr. Bill Storm with the Department of Commerce. After the presentation we will open the meeting up for questions and comments, as I

said.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So I'll just touch briefly on the As I said Xcel will explain in greater detail the project. But the Sherco Solar Project is a proposed 460-megawatt solar energy-generating It would be divided into an east block and system. a west block. Those two blocks of the project would connect to the electric transmission system at the existing Sherburne County substation by way of two new 345-kilovolt transmission lines, and they're relatively short, 1.7 and 2.3 miles in length respectively. And as I said Xcel will provide a much more detailed description of the project following my presentation. And there will be maps on the slides up here, Xcel will have, and as you noticed when you walked in, there's also two sets of maps in the back of the room for you to look at.

So the reason we're here tonight is because the project requires a total of three permits from the Public Utilities Commission. The Public Utilities Commission is the state agency in Minnesota responsible for permitting large energy facilities. And because the project, the solar project, is over 50 megawatts in size, a site permit is required from the Public Utilities Commission.

And then because the two transmission lines are over 100 kilovolts and greater than 1500 feet in length, each of those require a routing permit, which a routing tells the -- you know, where those transmission lines would go or be routed.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So therefore part of the reason for tonight's meeting and the written-comment period that follows this meeting -- it was provided in the notice -- is to seek comments on matters that can be addressed in either of the three permits, if they're issued, or matters that could be addressed in the environmental assessment that's going to be prepared. And Bill Storm will get to that. in this case, typically, a certificate of need is required for a project of this size. But the Commission, in a separate but related docket -- it was Docket 20-891 -- exempted this project from certificate of need requirements because it was part of an already approved bidding process. So that's the reason this doesn't need a need determination.

So at the end of this application process
-- and I'll get to that. I have a flowchart. But
at the end of the review process, the Commission
must make a final decision on whether to issue a
permit and what the conditions might be in the

permits. When making its decision, the Commission considers the whole record of the case. That includes the information provided in the applications; comments received by interested citizens, local governments, county governments, state agencies such as the DNR, MPCA; information that's presented in the environmental assessment I'm talking about.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

And also, there will be a report prepared by an administrative law judge, and they will prepare findings of fact, conclusions of law, and a recommendation to the Commission. And they look at the whole record when preparing that document. all the Commission's decisions -- when looking at all that information, the decisions are made in the context of does -- made in the context of the potential human and environmental impacts of the proposed project. You know, the Commission would consider -- these are just a few: Noise, aesthetics, public health and safety, land-use conflicts, historic resources, air and water quality, plants and wildlife. There's a whole list more that will be automatically included in the environmental assessment.

The Commission also considers methods

that are identified in the record or the environmental assessment that could help minimize, mitigate, or avoid any of the impacts that are identified. And if they can, they would, you know, propose conditions in a permit to assist with that. And lastly, the Commission looks at, you know, whether the project -- the efficiency of the project, the cost-effectiveness of the project, whether it contributes to security of the electric transmission system and so forth. So there's quite a few things the Commission considers at the end of this process, and they look at the entire record.

Oh, it did show up. I was worried it wasn't going to show up too well.

But up on the screen, you can see, is a timeline, an estimated review timeline of the state's review process for this application. And if you go to that third box down, we're at the public information meeting and scoping meeting, and tonight there will be an in-person meeting that we're here at. Tomorrow there will be an online meeting. It will be the same exact meeting, same information. You're welcome to attend, but what you hear tonight will be exactly what you would hear tomorrow, if you wanted to attend. But if you think of a question

overnight and want to propose that question at the online meeting, by all means please join. And that information was in the notice that was provided for tonight's meeting, and I'll have that up at the end of the presentation as well.

So after tonight's meeting and the comment period that trails after this meeting, the written-comment period, what would happen is all that information's taken and a scope of the environmental assessment's created. That just outlines the information that will be studied and the matters and topics that would be studied in the environmental assessment. Followed by that, in about January or February, the environmental assessment will be released to the public for public review, and that's a milestone in the project.

So once that's issued, a few months after that, we will be back up here in Becker, and we will have a public hearing. It's very similar to what we're doing tonight with the exception that an administrative law judge from the Office of Administrative Hearings will preside over that. So it's a hearing with a judge. And the judge will listen to your comments on the merits of the whole project on items that were identified in the EA or

not identified, items that have been missed that you may have commented on and somehow they were missed or items where there's still disagreement, you know, over what's been reported in the EA or by the applicant in its application.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So following the public hearing, there's a comment period. And the judge will take a look at all of the information received during the hearing, as well as the record, and as I said prepares the findings of fact, conclusions of law, and recommendation. That's kind of the last piece in the process. And so the Commission will take that report, the EA, and all the information, and around May or June of next year is when the Commission would make a decision on whether to issue the permits and, if issued, what conditions should be in the permits. So that's just a real snapshot of the It's a nine- to twelve-month process right now, and this is just a general estimate to give you an idea.

But with that, you know, that's -- this is the end of my presentation. I'll be around at the end of the meeting to answer questions about the Commission, the review process. So as I said next up I'll turn it over to Xcel Energy to describe the

project, and following that, Bill Storm with the

Department of Commerce will describe the

environmental-review process. Then we'll open it up

to questions. Thank you.

MR. WILLIAM RISSE: Great. Thanks,

Scott. Yeah, so as Scott mentioned, I'm here on
behalf of Xcel Energy tonight. My name's William

Risse. I'm a permitting specialist. I actually
work for National Grid Renewables. We're partnering
hand in hand with Xcel on this project, kind of
helping them get through the development process, at
which point they'll construct and operate this
project for the long-term.

I do want to encourage you, as Scott already mentioned, there's maps that are located in the back here. We'll be spread out after this. If you guys do have any other project-related questions, we're happy to talk with you one on one as well.

So with that, just to touch on kind of the partnership here. So as I mentioned, National Grid Renewables, we are a kind of nationwide renewable energy developer. We are partnering with Xcel Energy on this project. And Xcel Energy is partnering with us to develop this and construct and

operate the project in the long-term.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So now that you have a little background of who I am, and I think you're all familiar with Xcel Energy as well, I'll talk a little bit more about the project details here. So overall we're talking, the project size is 460 megawatts with about 230 megawatts in what we're calling the east and west blocks of the project. In total these blocks are about 3500 acres, which Scott already mentioned. And each block will have a transmission line -- which we shortened to HVTL, high-voltage transmission line -- from each block that goes to the point of interconnection, which is a substation within Xcel's existing facility. And so we'll get into the components here a little more as I go on. But as you all know, I think the location of this is -- it's right next door here in Clear Lake Township, Becker Township, and the transmission lines are in the City of Becker.

A little bit of background on commercial-operation date here. We're looking at kind of each block being constructed over a little-over-a-year period, with commercial operation as soon as December 31st of 2024.

Scott, could you go to the next slide?

So just a few details on -- so, like, what does a 460-megawatt project mean? What does that look like when you're talking of, like, homes being powered or something like that? So a project of this size can actually power about 100,000 homes, and that's the equivalent of taking about 60,000 cars off the road in terms of CO2 emissions. In terms of actual CO2 emissions, which it's a number to a lot of folks, but so 300,000 tons of CO2 will be avoided each year from this project. And that equates to during construction \$115 million in wages from about 900 union construction jobs and then \$240 million in terms of taxes and landowner payments over 35 years of the project.

In terms of just studies and things that we've done to kind of minimize environmental impacts for this project, we've completed wetland delineations of the site; we've studied cultural resources across the site; we've also coordinated with the DNR to do what's known as a natural-resource heritage information system review, which kind of looks at sensitive species across the site.

And we work closely with the Department of Agriculture. Something that we always look at

with each project is developing an agriculture impact-mitigation plan. So looking at what we can do as we develop the project to protect the land in the future for agricultural development post-project. And then lastly, something that we're also working closely with agencies on is a vegetation-management plan. So looking to establish robust vegetation beneath those panels. So in all that consultation with agencies, we really pull that information together and we try to minimize the impacts from these project components that I'll get into here shortly.

So here on Slide 12, you guys can see just kind of the basics of a solar project, which I'll go over here in the next few slides. So there's panels that are placed on a racking system. So what you can see here are kind of the basics of those racking systems.

First, we'll take a machine, and we'll pile-drive piles into the land. We'll then add a racking system on top of that, and that's this middle photo here. So this is actually what's known as a tracking racking system. So the panels will actually face north-south in rows, and they'll actually track the sun throughout the day. So it

will face east in the morning, kind of straight up and down in the -- or noon time, and then west in the afternoon. And then you can kind of see just more robust racking with kind of the full system built out at the right there.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So what goes on the racking, I would say that this is probably the most important part of the project, so the solar panels. This is what produces the power on the site. We have a few different solar panels here just because we keep our optionality open as we look to select these panels. Something I like to equate it to is, like, when you go to get tires on a car, you wait till there's a sale to get those tires. So similar here, we're looking at all the available panels and figuring out what the best option is here in terms of price and production. So what I have highlighted here is -it's a bifacial panel. So I like touching on this It's kind of cool technology. It actually collects sunlight on both sides of the panel, so anything reflected off the ground also gets collected.

If you want to go to the next slide.

So from here your panels produce that

power. They actually route that, and you can see it

on the site-plan maps in the back. They route it to an inverter, which is kind of the upper right of the screen here. So what happens is these panels create something known as DC electricity. It's kind of like a low-voltage electricity. It goes to these inverters, and they actually step that power up so it more easily can be transmitted to the collector substation, which is in the bottom right here. So your panels go to your inverters, and those go to the collector substation, and as I mentioned we have two of those substations located on the site.

Just one other thing I like to touch on here, is a question we often get, is kind of how loud is this equipment? Does it give off any noise? When you look at a project, really the inverters are the primary thing that give off any noise at all, and it's relatively minimal. A good way to equate it to is at about 150 feet for, like, a run-of-the-mill inverter, like, the noise given off is not more than, like, a high-efficiency dishwasher at that distance. So we go to great lengths to try to site these in the middle of the project at distances much greater than that. So, like, honestly, you probably wouldn't even know that they're running out there.

All right. The next slide.

so we've kind of gone over the components now. So what's kind of the phasing of the construction out there? So construction generally consists of a few steps. So first, site preparation; then that pile installation I already mentioned; followed by putting the racking on that piling, which we kind of already went over; followed by installation of the actual modules or panels out there, interconnecting all that into that collector substation; and then following that disturbance, making sure -- as I mentioned with that vegetation-management plan, re-vegetating the site.

So to go over these steps in a little more detail. So in terms of site preparation, what are we talking about there? So this site is pretty flat. I mean, a lot of you guys are from the community. So there isn't a lot of grading we need to do out there, but there'd be a little bit just to make sure that our panels are at the best angle they can be at to produce as much energy as possible.

And then so following that site prep,
which will kind of be that first step, will be that
pile-driving installation. People generally ask,
like, how long does this pile installation take? So

we move kind of from one side of the project to another. So, like, pile installation, there will be a little bit of pile-driving in one area for a short amount of time, but then that will move on to another area. And following that, really most of the install's pretty straightforward, and you'll just have people in, like, small vehicles installing the modules out there.

In terms of re-vegetation, I'll just touch on that a little more. Xcel really takes great pride in this in that they're developing a bigger, robust vegetation-management plan. They're looking at using native species across the site and collaborating with the Board of Water and Soil Resources -- BWSER for short, we like to call them -- to actually be a pollinator friendly certified site.

so after all these panels are installed, we're looking to vegetate this with pretty high quality vegetation that can potentially have some benefit for the area under the panels and the surrounding area. So this is just a bit more on that re-vegetation. You can kind of see, after those panels are installed, what it might look like out there, just a little bit of vegetation. That

middle slide being kind of -- here's a water feature in this case or a waterway where they put down some additional matting to ensure that no erosion occurs and then kind of the end product on the right there of a re-vegetated site and kind of what it will look like for the long-term.

So here's just a site overview again just as a reminder. So the west and east block will really be dominated by those solar panels and inverters, as well as access roads to get to them. You can see where those collector substations are and then those high-voltage transmission lines leading from those collector substations. That really carries the power into the grid.

So here's just a couple real quick just to take a look at what it will actually look like out there. So these are two pictures we collected from the project area. The bottom right here, you're looking at 115th Avenue facing south towards Highway 8 or River Road, the River Road along there. You can kind of see, this is about a little over a tenth of a mile, just kind of what the panels look like at a bit of a distance. Really looking at this, I feel like they blend in pretty well at a pretty short distance. And then looking at the top

left here -- this is actually near the far end of the west block, looking kind of down Highway 8 a little bit, River Road -- just at the panels a little closer up with some just existing vegetation there, just kind of to give you a reference to, after this is established, what it will look like.

So we're going to be here for a while.

So the proposed project would be 35 years. So what's going to happen during operations and maintenance? So really after all that construction's done, there isn't a whole lot that happens on the site. There will be minimal traffic, probably four to six regular onsite technicians that are just keeping things up and running, making sure things are working well. There will be routine electrical inspections.

There will be some drone inspections out there just looking at the integrity of the panels, making sure everything's looking good. If there is anything that looks off, repairing those panels and just maintaining the vegetation out there, making sure that erosion's minimized as much as possible. Last thing to touch on is just that occasional mowing, probably two to three times a year for the first few years. But really the end goal here is to

minimize that mowing as much as possible and looking at letting that native vegetation establish and benefit water quality and such.

So finally, one last thing I like to touch on is project decommissioning. So at the end of the project's life, there's a few things that could happen. Say, there's a new latest and greatest technology, something new that produces energy even better than these solar panels do. The project could be decommissioned and the components would be removed, reused, or recycled, and the site would actually be converted back to agricultural use.

Alternatively, if the site would be repowered, potentially, new panels could be installed, or the existing panels would still have an operational use that could be extended into the future. And something just worth noting with this return to agricultural use for the site to be decommissioned is this native vegetation in those roots would really allow that soil to rest, kind of lie fallow and potentially could help to even improve agricultural use over the long-term, if it was returned to that use.

So with that, our contact information is

listed up here as I mentioned. Aaron and a couple others from Xcel are here, as well as myself. We're happy to answer questions following this and happy to speak with you more about the project. So very much appreciate your time tonight, and I'll hand it over to Bill.

MR. BILL STORM: Thank you. Good evening, folks. Thanks for coming out. My name is Bill Storm. I work with the Department of Commerce. The Department of Commerce does the environmental review, the document that Scott talked about. We produce that document for the Commission, and the Commission, as Scott laid out, makes the final determination.

What we're here to do tonight, at least my portion, is to talk about the scope. What is scoping an environmental document? We scope an environmental document because we want the decision-makers to be informed. And the way we do that is we come out to the public and we ask the public do you have concerns? Do you know -- do you have local knowledge? Are there things you want to make sure I cover in the environmental document? So this is all part of scoping as is the comment period that follows.

Then the environmental document, the environmental document is basically an assembly of the objective facts so that different parties or different interested people can use the same facts to build their argument or make their comments. The process does not advocate for or against the project. Scoping focuses the environmental assessment on the most relative information. It provides an opportunity for the public basically to give me input into the table of contents for the document.

AUDIENCE MEMBER: Please put the microphone up to your mouth.

MR. BILL STORM: Oh, sorry. I usually have no problem with hearing me. I'm pretty loud.

Anyway, basically, what you do in scoping is you give me input that can be on the potential human and environmental impacts that can be studied, ways to minimize them, mitigate them, or avoid them. And also, if you have -- when I come out -- when we come out to the local community, we're looking for local information. Do you know something that either isn't covered in the application or that you want to make sure I capture and becomes part of my document? Also, if you read the applications and

you think there's something that's mischaracterized or not quite right, I want you to bring that forth in your scoping comment so I can capture it, correct it, or at least discuss it in the environmental assessment.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

The Department of Commerce as I said will prepare the environmental assessment. It will describe the project. It will describe any alternatives. With a large solar project like this, it's very rare that there are alternatives to be described. Transmission lines, they're short. Normally, if we have a long transmission line, we would ask the public are there route segments or alternative routes that you want us to consider and evaluate? Not really applicable to this project here. Also, it assesses the potential human and environmental impacts. It identifies strategies to avoid and mitigate the impacts. The document that I write, the environmental impact that I write, will cover both the solar farm and the two transmission lines.

Okay. Following tonight's meeting -actually tomorrow night's meeting, there's a comment
period. You can comment in various ways. You can
comment tonight on the record. We do have a court

1 reporter here.

AUDIENCE MEMBER: Is there a meeting tomorrow night?

MR. BILL STORM: There's a remote meeting tomorrow night.

AUDIENCE MEMBER: What do you mean by remote?

MR. BILL STORM: Webex, through the Internet. It's in the notice, how to do it, if you want to participate in tomorrow's meeting. As Scott said earlier, tomorrow's meeting will pretty much be -- the information will be a repeat of tonight. But it's just another way you can have people -- maybe people aren't comfortable coming out in public just yet with the pandemic and stuff.

MR. BILL STORM: Scoping is what we're doing right now. I'm going to ask the public are there issues, concerns that you have that you want to make sure I cover in the environmental document? Like, you may have a concern about, hey, Bill, when they -- when this lifetime is over, this 25 years is over, what happens to all the material? Are there hazardous materials in the panels? Where does that go? So you may have concerns. You may have concern

of why are we using farmland to produce energy, taking farmland. So you may have these issues. Scoping is an opportunity for the public and local units of government to voice those comments, those concerns to me so I can capture them in the environmental document. So that's what scoping is.

After the comment period closes -- Scott went over the process a little bit. But when the comment period closes, I will take those comments and I will put together a recommendation for a scope, basically a table of contents of what the environmental document will be. And I will present that to the Commission, and I'll present it to my commissioner for approval. Once that's approved that sort of locks in the table of contents for the environmental assessment. So that's -- and that's called a scoping-decision document, and we're probably three weeks away from that.

You know, so -- so if you want to comment, if you have a concern, if you have local knowledge, there are multiple ways for you to comment. You can use the comment sheets that I put on the desk and leave it at the drop box. You can mail it to me. You can fax it to me, or you don't even have to use my sheet. You can just send me an

e-mail or send me a fax from your own stationery and give me your comment. But you have to have it in by the end of the comment period.

My information is there. You can also go to our website -- and that's the mn.gov/commerce/energyfacilities -- and make your comment electronically. You go to that website. You'll see the Sherco Project. Click the button, and you can write your comment out, what your concern is, what you want me to make sure I cover in the EA. The comment period closes Wednesday, September 15th. By the end of business day, make sure you have your comments to me so I can consider them as I move towards developing the scoping decision.

AUDIENCE MEMBER: Can we write a letter?

MR. BILL STORM: You can certainly write
a letter, letter, fax, e-mail, any way you want.

Tonight -- you can speak tonight if you have
concerns too, and you can do it multiple times, if
you -- you can speak tonight. And you can follow
that up with a written comment to me if you have a
concern that you want to make sure gets captured,
not only in the record but in my environmental
document.

Okay. I'm going to turn it over to the public basically to get your comments and questions We've got a small group. and concerns. I'm used to having big groups, so I use cards. But when I call your name, and I'm going to call one person at a time, please don't interrupt them because the court reporter has a real hard time keeping up with multiple people speaking. Be respectful to everybody who's speaking. You may disagree with what somebody says. You may agree. Just be respectful.

When you begin, I want you to stand and state and spell your name for the court reporter and also talk slower than I do. I -- court reporters --I talk way too fast for the court reporters. I'm asking you, for me, for my portion -- your comments on the scope -- what you want to see in the scoping document. So focus your comments on that. also, if you have questions for the applicant, this is the time to ask those questions also. Limit your initial comments to five minutes. Once we go through everybody, we'll circle back if people have additional things they want to say.

Okay. Just another reminder of what to focus on: Focus on what you're concerned about,

either human health or environmental issues; if you have thoughts on how to minimize, mitigate, or avoid an impact that you think is coming up; anything -any unique characterizations or local knowledge. Ιf you have local knowledge about the area that you want to make sure I capture in the environmental document, please bring that forward. And again, if you've read the application, you went through it, and you have issues with what they present, bring that up in your comments also. Again, remember, September 15th is when the comments are due, mail, fax, e-mail, variety of ways to make comments, and electronically through our website. This is all our information.

And what I'm going to do now is I'm going to call on people with the cards. Do you want them to step up to the mic? Okay.

Okay, when I call on you, step up to the mic, state and spell your name for the court reporter, and say your piece. And then when I'm done with the cards, I will go by show of hands today. Could've went by show of hands here because it's a small group. Randy Seeley.

MR. RANDY SEELEY: Thanks. Do you want me to state my name to her, huh?

MR. BILL STORM: Yep. Spell and state
your name.

MR. RANDY SEELEY: Okay. It's R-A-N-D-Y, S-E-E-L-E-Y.

I lived in Clear Lake Township all my life. And if you look at the maps, the Seeley Farm is where they want to start on the west. And I'd gone a lot of years of duck hunting. I used to get the cows back there, and I still like to snowmobile there. And I don't know how to do that if they want to fill it up with solar panels. I don't like looking at solar panels. I'm a farm boy.

In 1979 in July, I started at Sherco.

And I was a heavy-equipment operator, and I dumped coal trains until January of 2017. So I was there more than 37 years. And I think it's asinine shutting down Sherco and filling our home area with solar panels. I don't like looking at them, and they're a joke. When you drive on County Road 8, you'll see a solar panel with a little bitty wire going to a high line. People need to go back to Sherco and see the humongous power lines coming out of there and tell me who produces the power. And I -- I don't know how -- how much land is it gonna take to replace Sherco? Nobody can answer that.

1	And how do these solar panels produce
2	power when it's December 21st and we only have six,
3	seven hours of daylight? You know, back in 1980,
4	Mount St. Helena blew its top, and the ash came all
5	the way to Minnesota. And at that time I was told
6	that it produced more PCBs and pollutants and carbon
7	dioxide since the beginning of the industrial
8	revolution. So this having where would this
9	country be without fossil fuels? And what was I
10	gonna say? 1980, that was 90 years into the
11	industrial revolution, and these environmentalists
12	just want to destroy our way of life. And I don't
13	like looking at them solar panels, and I've lived in
14	Clear Lake Township all my life. And what else?
15	I'll turn it over to somebody else.
16	MR. BILL STORM: Thank you, Randy. Next,
17	Andy Person.
18	MR. ANDY PERSON: Yep.
19	MR. BILL STORM: State and spell your
20	name please, Andy.
21	MR. ANDY PERSON: Hi. I'm Andy Person,
22	A-N-D-Y, P-E-R-S-O-N.
23	Well, I'm a farmer, and I live right next
24	to the Seeley Farm. And my what I want to say is
25	I'm just worried about the environmental hazards of

it all with the cadmium and -- what's the other -lead being inside these panels. I've heard that
rainwater can rinse it off and go into the
groundwater. I've also heard that these panels can
also not be recycled after 30 years or 20 years,
that they're commissioned. And a lot of these
farmers, I've heard them, they're putting these up,
are written up. They have -- what was I gonna say?
I'm nervous to be talking tonight.

25

AUDIENCE MEMBERS: Don't worry about it.
You're all right. You're okay.

MR. ANDY PERSON: I'm also worried about how they're all gonna get recycled because I know a lot of them get put into the landfill, and of course we can't even put a battery into the landfill. That's about -- oh, another thing, since I've lived out there, I've seen all the wildlife. And I'm worried about where the deer are gonna go 'cause once you get all these up, there's a big fence that goes around the whole thing, and none of the animals can go in there. I seen my grandpa and my dad and uncle and me now -- I'm gonna acquire the farm when they -- during their passing, and I want to keep my family going out there. And I -- I'm -- I'm just --I'm worried about what kind of things can happen

with all that is in the panels. And I guess that's about what I have to say. I don't know what else to say right now. Thank you.

MR. BILL STORM: Nathan Runke, please state and spell your name.

MR. NATHAN RUNKE: Yep. My name's Nathan Runke. So that's N-A-T-H-A-N and then Runke is R-U-N-K-E.

I'm with the International Union of
Operating Engineers Local 49. So we cover the
heavy-equipment construction industry for the unions
in Minnesota, North Dakota, and South Dakota. So
I'm going to take a different kind of tack than what
was being talked about so far.

At this point at least, there has been a pledge to use local union labor for this project if it is permitted. So I guess in that way we would like to offer our support because we think that's an important thing for any of these new energy projects; that if they go forward, they should be built with people from the area so the benefits that come from them -- or, like they said, the wages that would be put forward with a project like this -- would go back into the community and not be built by, you know, a group of people from Texas,

Oklahoma, wherever, and sent back home that way.

So, I mean, I guess we -- we're in support of projects that go forward like this. So if it is approved, I guess we support that. The rest of it will be up to you guys. You know the local area a lot better than I do. So just wanted to say my piece that way. So I'll let everybody else get back to it.

MR. BILL STORM: Thank you, Nathan. Tory
Benstrom or Terry Benstrom. I might be butchering
this name. I'm getting old. Tracy Bertram.

MAYOR TRACY BERTRAM: I've been called a lot, but that is not one of them.

So Tracy Bertram, T-R-A-C-Y, B, as in boy, E-R-T-R-A-M. And I am the mayor of the City of Becker, so welcome.

A couple things for you gentlemen this evening. Please allow me to begin with the City of Becker is not opposed to the Sherco Solar Project; however, we are not supportive of the current proposed footprint of the project. Our main concern is, as currently configured, the Sherco Solar Project will landlock the Becker Business Park. A robust business park in Becker is needed to allow the community to survive the decommissioning of

Sherco and the coal transition. Landlocking the Becker Business Park will not allow us to have long-term development options.

With the closure of the Sherco Power

Plant, the city stands to lose as much as 75 percent
of its tax base along with 300 well-paying jobs.

Furthermore, the combined cycle natural gas plant is
no longer slated for the development here in Becker.

We had the opportunity to become a national model
for coal-transitioning communities, and
unfortunately, the current footprint at the Sherco
Solar Project jeopardizes a successful
coal-transition outcome.

In short, our community is posed to lose significant tax base, a wide variety of well-paying jobs, and the direct-indirect and induced economic activity that goes along with our major employer.

Our business --

AUDIENCE MEMBER: Speak into the mic. We can't hear you back here.

MAYOR TRACY BERTRAM: Wow, okay.

Our business park is a key part of the strategy to recoup our losses. This project, as currently sited, poses challenging for the city's long-term planning and economic development, which

we need to supplement this loss in tax revenue. The environmental assessment needs to account for the impact on the local community and tax base and explore mitigation strategies for the negative impacts.

evaluated for this project. As evidenced in the city comments of the docket, the city has sought a remedy throughout the proceedings on changing the proposed site, including seeking exclusions of parcels immediately abutting the city boundaries. Xcel has mentioned landowner willingness and distance as a reason the other sites have not been considered. For a city to effectively plan long term, we have to consider expanding outside of our city boundaries. This is incorporated into our comprehensive planning process.

The project as proposed will derail the city's long-term planning. The project abuts city boundaries where we have long-term plans to expand for economic development, which we are currently installing city services in, preventing the preparation of those sites, as they are being utilized to host solar panels, and limits the use for the utility-expansion investments being made by

the city. The proposed land locks the city into the current boundaries where the city has been planned to expand, and we need to consider that -- what the highest and best uses of land are as we plan.

22

23

24

25

As the development begins scoping the environmental assessment and proceeds with the project development, we ask that the following be considered: The long-term impacts that this project will have on the local economy and tax base, especially in light of the decommissioning of the Sherco Plant and that we will now see no tax dollars come into the city from the gas plant; the environmental impacts that this project will have on the proposed conversion of land use. The Department needs to ensure consistency that the state's regulatory goals for municipal development and expansion, Minnesota Statute Chapter 414. simply, we propose the footprint of this project be altered to remedy our concerns, which is a bit further from our city boundaries.

Last, to achieve these two objectives, we respectively ask that alternative sites be evaluated for this project. We have proposed that specific parcels be removed from the footprint of the plan, and we are planning to provide more detail in

written comments that we will submit in the next
couple weeks for those.
So I'd like to thank you all for
listening this evening. Thank you.
MR. BILL STORM: Thank you, Mayor Tracy.
May I add, Mayor Tracy, when you make your comments,
be as specific as you can about your alternative
that you'd like to be evaluated.
MAYOR TRACY BERTRAM: Sure. Like, parcel
numbers? Is that
MR. BILL STORM: Yeah, parcel numbers.
If you can hand draw out a map or one of the maps
from the applicant, you know, from the application.
And anything you can provide me so that I have a
viable alternative that I could put forth in front
of the Commission and my commissioner.
MAYOR TRACY BERTRAM: Okay.
MR. BILL STORM: Okay. Just to try to
get into making the scope.
MAYOR TRACY BERTRAM: Perfect.
MR. BILL STORM: Thank you very much.
Senator Andrew Mathews.
SENATOR ANDREW MATHEWS: Thank you. I'm
Andrew Matthews A-N-D-R-E-W. Mathews is spelled
M-A-T-H-E-W-S and I've had the privilege of

serving the City of Becker and this area in the senate for the last five years. And I'm basically here -- I want -- I don't -- I'm not going to speak long tonight. I'm mainly here to listen to many of my residents here but wanted to let you know that I'm here to support my constituents and the mayor and the city here. We've been working on this project for many years since -- on the Sherco issue since I came into the legislature five years ago. Representative Mekeland's with me here as well, my house counterpart, and there have been a lot of concerns about the direction that this has gone.

Becker is taking a big hit with the loss of the current plant and then the loss of the proposed plant that was going to replace it. And we're being offered a large solar field, four to six regular on-site people working there to replace the hundreds of current jobs here in Becker currently and, to echo what the mayor said, land locking the city and preventing them from doing the expansion they want to do to try to offset the loss of the plant. So I'm here to urge the Commission, the Public Utilities Commission, I'm here to urge the Commerce Department and Xcel that we do need better partnership here with our local area, with the city,

1	with its district.
2	I'm going to keep watching and keep
3	working on this, and I want to urge you to not just
4	take this and file these comments away and keep
5	doing whatever plans you want to do. We do need
6	some changes that are made to this. Please listen
7	to our city. Please work together on what we can
8	make for adjustments to this plan. And I'll
9	continue to be involved and watching and would be
10	happy to speak with any of you if I or my office can
11	be of any help. So thank you.
12	MR. BILL STORM: Thank you, Senator
13	Andrew.
14	REPRESENTATIVE SHANE MEKELAND: Bill, can
15	I just have a quick minute?
16	MR. BILL STORM: Sure.
17	REPRESENTATIVE SHANE MEKELAND: Thank
18	you. Thanks, Bill.
19	MR. BILL STORM: State and spell your
20	name.
21	REPRESENTATIVE SHANE MEKELAND: State
22	Representative Shane Mekeland, S-H-A-N-E,
23	M-E-K-E-L-A-N-D.
24	Everything that Senator Mathews just
25	said, and on top of that, there's also another big

component that there has been a committee formed for energy-transitioning communities, which I've been placed on that. Those meetings have not started yet. And I find it really unfortunate that we're jumping into this with a comment period closing in two weeks, when this is what was going to be needed to figure out what these eight communities throughout the state are going to have to go through.

So I would like -- and I'll enter comments online. But I think this is a very important thing because there are a lot of concerns on many things including the landlocking of what this is going to do the industrial park that we worked really hard on, trying build that out and get funding for. So it seems like we're kind of putting the cart before the horse. Thank you.

MR. BILL STORM: Thank you. Dan McGowan, state and spell your name.

MR. DAN MCGOWAN: Hello. My name is Dan McGowan, D-A-N, M-C-G-O-W-A-N.

I am with the Laborers' International
Union of North America. I'm an organizer with the
laborers' union, and because of my job, I travel and
work throughout the State of Minnesota and North

Dakota. And part of my job is to attend public hearings such as this one, meet with community groups. But I also meet with contractors. I meet with workers.

anyone ever said that we do not need jobs in our area. In fact the opposite is true. And these jobs that we're talking about, they can't compare with what the plant was. But these jobs are going to have excellent pay and excellent benefits, and I speak in support of the project. Thank you.

MR. BILL STORM: Thank you, Dan. Jim.

MR. JAMES NEWBERGER: I assume that's me.

MR. BILL STORM: Yes.

MR. JAMES NEWBERGER: My dad had another name for me. My name is James, J-A-M-E-S, Newberger, N, as in Nancy, E-W-B, as in Baker, E-R-G, as in George, E-R.

I was a former state representative. I served in the Minnesota House of Representatives for six years. I was the vice chair of the jobs and energy committee. You have some very well-informed legislators in this room. Andrew Mathews, senator, is the chair of the energy committee, and Shane Mekeland, representative -- did I call you

Representative? Senator. Shane Mekeland, representative, is also on the energy committee. We are fully versed in these issues, and I'm here today to express my deep, deep disappointment and anger with Xcel Energy.

The Obama power plan came in, that whole Obama administration came in and said, simply put, shut down your coal plants. That was a death knell for this community. Myself and Senator Brown are retired. We worked for two years to get some type of alternative in the Minnesota House and the Minnesota Senate. And we worked for two years, and the doors kept slamming in our face. And the whole time I had meeting after meeting after meeting with Xcel Energy in my office, in this community. We need this, Jim. We've got to do this. They're shutting us down. Whatever you can do.

Senator Brown retires and Senator Mathews comes in. We keep working. We keep pushing, committee meeting after committee meeting after committee meeting, house floor fights, senate floor fights. And we finally get it passed, a bipartisan bill signed by Governor Dayton to give Xcel Energy the gas plant that this community needs. And now where's it going? North Dakota.

You threw us under the bus. What's our consolation prize? Solar fields. Am I angry? I love this community and I see what's happening. This is bait and switch. And I don't, for a minute now, believe that they were ever intending to really put a gas plant here. There's a few other concerns that I have, and I can be angry 'cause I'm retired now. These guys, they can't. But I don't have to be They've got to be nice. anymore. But I know the game because I lived it and I worked it and I was right at the ground zero for all of this.

Is it my understanding that some of the land primarily that this solar array is going to be built on is owned by township supervisors from some of the area townships? And will they be voting or have they voted on these projects? Because if they have or if they intend to, this is a direct conflict of interest, and don't think that this is going to be left alone. This is a legal issue. I spoke to the Minnesota Association of Townships about this today, and they said absolutely not. This is a conflict of interest because it's my understanding that these handful of potential landowners could be making up to \$25 million over these 30 years. I've

got a problem with that.

24

25

And jobs, you know, everybody wants jobs. Right now we've got 300 full-time employees at Sherco, 300. Those are production jobs. Do you know what the ratio is, service jobs to production 7 to 1. So for every production job, you jobs? have seven service jobs. Those 300 workers right now at Sherco are supporting 2100 jobs. We're going to lose a big chunk of those, but we were willing to do that because we had no other choice. We had the gas plant. So the gas plant comes in. about 50 employees. Still, that's about 350 service Now we have, what, four to six full-time employees. Really? Folks, if you don't see a human impact here, you need to -- you need to get some glasses because it's staring us in the face.

I'm so significantly put off by what's going on here. I can't even begin. The amount of energy, the amount of meetings, the time, what we put into this to get this gas plant here -- and now it's going to North Dakota. Really? My disappointment is just beyond comprehension.

So we're getting a solar field. Slide 10 showed, what, 900 jobs, and there was these assurances that they would be local jobs. There

aren't 900 workers here. They're not going to be local. Some of them might be and God bless those that are. But the majority of them are already contracted workers that go all around the country. The majority of them, I don't believe for a minute, are going to live anywhere within 50 miles of here. So how many local people are they going to hire? And if they do, great. God bless them. But what's going to happen to those people after the job is done? It's not a full-time job.

And I'm going to close with this, the annual power production. If you have a solar array, 460 megawatts, the annual generation is about three times less than it would be for coal. Coal out-generates solar almost 4 to 1. And if you want -- if there's anyone here that wants to tell me I'm wrong, I dare you. I spent six years on Pat Garofalo's energy committee listening to this argument. I know what I'm talking about. What are we going to do about the power shortage? Well, that's easy, build the plant in North Dakota.

Thank you for your time. Thank you for understanding my passion for this because this community just got thrown under the bus. Thank you.

MR. BILL STORM: Thank you, Jim. Mark

1 Kolbinger.

2 MR. MARK KOLBINGER: I've been called worse.

MR. BILL STORM: Please state and spell your name.

MR. MARK KOLBINGER: You bet. My name is Mark Kolbinger, Mark, M-A-R-K, Kolbinger, K-O-L-B, as in boy, I-N-G-E-R.

I'm a 50-year resident of Becker. And for the past approximately 20 years, I've worked as a local newspaper reporter, with extensive experience covering local and county government.

I'm also a former city council member in Becker and have gained valuable experience working on behalf of our citizens in that role.

I am here to speak tonight because I've heard from many local officials that have not been able to have their voice heard, as Xcel is proposing to establish the biggest solar farm project in the history of Minnesota within our county borders. And yet because of the process that has been established by the state and the PUC, this project faces little, if any, local scrutiny of their plans. I am neither pro solar or against solar, but I'm vehemently opposed to the process that's being used. The

entire process is flawed, and it ignores the input of local officials in terms of the east block of the project.

In the west block, I'm aware of at least one governmental agency that has sent a letter of support for this project, so tonight I'm addressing the east block. The Commission has asked us tonight to keep our comments focused in three areas, including anything that is missing or mischaracterized in Xcel's application. This is where I'll focus my comments.

This is gonna be the largest solar project in the history of Minnesota by three and a half times, 3500 acres. I believe the largest one currently is 1,000 acres. I find that incredibly frustrating that a project of this scope has removed all local government oversight.

At 3500 acres this project will significantly change the landscape of this area for decades to come, and if any other project was ever proposed such as this anywhere, it should be subjected to local government scrutiny. In this case it's never happened. Xcel has mischaracterized their relationship with several local units of government and testified in the past that they had

extensive contact with these units of government, and this is false and misleading.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

Don't just take my word for it. Department of commerce, the Minnesota Commerce Department, in a letter, dated August 26th of this year to the Public Utilities Commission, used the following words to describe their dealings with Xcel Energy, quote, "Xcel providing incorrect modeling files, end quote. And the Department also noted, quote, "difficulties in gaining access to needed forecasting skills on short notice," end quote. The PUC did not grant an extension on the comment period despite the fact that the Department also noted in this letter that they, quote, "continue to have difficulty in obtaining timely and accurate information from Xcel Energy," end quote. I could go on, but I won't.

But suffice it to say that Xcel is not providing information to the state -- to a state agency, and when it does, it is late often times and many times inaccurate. Xcel also testified in front of the PUC about their extensive contact with local governments, and at least in the case of the east block, that amounted to two meetings at which few, if any, of the local concerns were addressed or

answered. As a newspaper, my employer the Patriot has reached out to Xcel Energy several times, requesting interviews and answers to questions in the interest of our nearly 20,000 readers in this area. What we have received back is silence, obfuscation and a lack of response or extremely tardy responses in the form of press releases that did not address our concerns.

It's apparent and obvious that Xcel
Energy has not provided timely information to the
state, some local governments, and the local press
regarding this project. I think that strongly
suggests there is misleading and mischaracterized
information in this application. Because this
process is flawed, the east block at a minimum
should be paused, and these local units of
government should be allowed the chance to give more
input into the matter.

Just this week the headlines in the press read that the new wind power generators could be 40 stories high. Under that same process that's currently being used to site in the largest solar project in the history of Minnesota, that 40-story-high wind generator could come to a parcel of land near you, and there would be no local input

by townships or the county government. In fact a Sherburne County resident hoping to put in a new septic system or an accessory structure faces more local government scrutiny than does this project. To me, that's astonishing. It's unbelievable. This is wrong, and it lacks an element of transparency that is needed because the applicant cannot be trusted to submit accurate, truthful, or timely filings in this matter.

I've tried to direct my comments to the scope of the environmental assessment. The problem is that when the process is flawed, biased, and omits completely the opinions and conditions set forth by local officials, we're left trusting the word and decisions of a mega-million-dollar corporation and an unelected body of commissioners who do not reside anywhere near where these same environmental concerns might happen. So why not do this: Why not treat this as two projects? Why not give each separate project on the east and the west block the individual local attention it deserves?

I urge the Commission to put a pause on the process of the east block at a minimum by having more meetings with local government and holding Xcel accountable for their misleading, inaccurate statements on local government cooperation, as well as extending the comment period because of Xcel's inaccuracies, omissions, and lack of transparency. Decision-makers, you said earlier, Mr. Storm, and I agree, need to be informed. The problem is none of us are decision-makers because that's been completely taken away from the local units of government. Thank you.

MR. SCOTT EK: I just wanted to clarify I real quick. Just -- Mark, just wanted to clarify I understand your concerns. I understand your concerns. I just want to -- I went over briefly the process that we're here tonight. It sounds like you're bringing up other related processes that had happened as well with regards to the coal plant, the gas plant, others items.

But I just want to let you know for this process we're focusing on a proposed solar project that Xcel has applied for in their applications, which is the solar site and the two transmission lines. And this is the very beginning of the process. So right now, you know, we're looking for comments of course on the project and questions about the project and the process and, as Bill said, issues that should be addressed in the environmental

assessment, such as your comments on the east block.

And your comments are relevant. This isn't the -- this is the beginning. There's going to be -- down the line there will be a public -- we'll be back here for a public hearing with an actual administrative law judge. And generally, during these processes that's when -- that's when the county, counties, or local governments or townships will raise their concerns with that administrative law judge.

And they are a judge, and they will put together findings and put together the arguments of the local government units and put together the judge's own conclusions and a recommendation of what could happen, for instance the mayor's suggestion on, you know, changing the site boundary. You know, that's at play. So I just wanted to let you know that there are -- you may feel the process is flawed, but we're right at the beginning. And I can assure you there's going to be much more process down the line. We have about a year to go.

But I just wanted to let you know that.

There will be more pieces of -- you'll be able to bite at the apple a few more times here. And the judge's reports provide an important document in the

1 process as well, so. 2 MR. MARK KOLBINGER: Could I quick 3 respond to that? MR. BILL STORM: As long as we're going 4 off script --5 MR. MARK KOLBINGER: I'll wait till -- I 6 would be happy to wait till the end to give 7 8 everybody else a chance. 9 I just wanted to input MR. BILL STORM: something as long as we're going off script. 10 When the application is submitted to the PUC, one of 11 12 the things Department of Commerce does is we review the application for completeness. And what that 13 means is does the application have all the pieces 14 and parts that the rules say it has? Not the merits 15 of them, but does it have the pieces and parts? 16 17 Also, at that time we comment to the Commission about whether an advisory task force is 18 necessary or not, and that usually hinges on whether 19 -- contested areas of fact -- is there material --20 21 and what controversy is there. And my recollection 22 is when the application came out for public review, 23 these issues that the local units of government are bringing up weren't brought into that record at that 24 So my recommendation to the Commission was 25 time.

that at this time I don't see a need for an 1 2 environmental task -- for an advisory task force. I would suggest probably that those of 3 you that are local unit of government officials look 4 at the rule that speaks to an advisory task force 5 for these energy projects, and you may want to 6 consider asking the commission, hey, we need an 7 advisory task force on this. I can't say what 8 they'll do with that. I'm just saying that's 9 10 something you should look at. Okay. We got one more person, Robert 11 12 Baker. 13 MR. ROBERT BARKER: Barker. MR. BILL STORM: 14 Barker. 15 MR. ROBERT BARKER: I'll put my comments online. 16 17 MR. BILL STORM: Okay, Robert. You sure? 18 MR. ROBERT BARKER: Thank you. MR. BILL STORM: And, Bud, do you want to 19 20 -- okay, you'll give it to Mark. Okay. So that's all the cards. So we're 21 22 going to go by show of hands. Why don't we have you 23 come up for -- it seems like you have a little bit 24 of rebuttal. Try to stay within the box a little 25 bit.

MR. MARK KOLBINGER: Absolutely. I do

Mr. Ek, I appreciate your comments. never mentioned the coal plant. I never mentioned the gas plant in my comments. I would just like I'm talking strictly about this process that noted. because as I read through what's happening tonight, we were told to comment on anything that is missing or mischaracterized in the applications. Energy mischaracterized their relationship with local units of government. I think that's germane to what you're reviewing. They made statements in front of the PUC that we've had constant contact with the townships. That might be true in the case It's not true in the case of Becker. of Clear Lake.

I've covered these people. I've known them for decades upon decades. I have experience. I sit at the meetings, and I hear their frustration, and I hear what Xcel says to the PUC and what's reported back, and it doesn't jive. So I think that fits the criteria of mischaracterized or missing pieces in the application, and I'll stand by that.

Again, some local units of government feel like they've been heard. Others feel like they haven't. You need to know at these meetings when

Becker Township and some of these representatives have told Xcel we would like some of our input to be considered, they've said you're not part of the process. We go to the state. We're gonna do this whether you like it or not. We're here to just let you know what we're doing. Just because somebody can do something doesn't mean they should do it.

If I could very quickly, other questions. Because Xcel won't respond to us, I have no other --I can do a one-man protest out in front and probably get locked up and things like that, but they won't answer my questions. They won't respond to us. are these U.S. made solar panels? The environmental impacts, other solar farms have reported between 5 and 7 degrees Celsius increase in the ambient air temperatures. If you've lived in Becker for any number of years, you know what the Sherco split is. It means rain comes to Becker, and then it magically goes to St. Cloud and Monticello. What is 3500 acres of increasing the ambient air temperature 7 degrees Celsius gonna do to our climate? I thought -- I was pretty sure there'd be some environmentalists here asking that question tonight but apparently not.

Emerging research out of Israel talks

about leaking solar panels, the toxicity of those heavy metals. And it's seeping into the bones of the people that live near there and work near there. Please include that in your environmental assessment. Recycling fees, 20 to \$30 per panel, and it costs 2 bucks to put into a landfill.

I'll end with this. Many people know what the NIMBY syndrome is, not in my backyard. InBecker we have the PIMBY syndrome. We say please in my backyard. When NSP came looking for a place, Elk River said no. Big Lake said no. Becker said yes. When Vonco needed a spot for their landfill, Becker said yes. When Northern Metals needed a place to locate, we opened our arms. And we said PIMBY to all these people because we have rigorous local government oversight into this, which we don't currently have. We do our homework here. We hold our local officials accountable.

This process does not give our local officials in Becker -- on the east block is what I'm discussing. It doesn't give them that ability, and I think that fits the third criteria we were asked to comment. Thank you for your time.

MR. BILL STORM: Thank you.

MR. RANDY SEELEY: Can I talk about --

18

19

20

21

22

23

24

1	MR. BILL STORM: Yes.
2	MR. RANDY SEELEY: Sherco Coal Plant?
3	MR. BILL STORM: Yes, you can please
4	step to the mic and state and spell your name again.
5	MR. RANDY SEELEY: Okay. It's Randy
6	Seeley, S-E-E-L-E-Y.
7	I got a little shook up last time. I
8	take personal this whole thing 'cause I was a farm
9	boy where they're proposing them solar panels, plus
10	I worked at Sherco for 37 years and five months.
11	And back in '79 and '80, working in the scrubbers in
12	Sherco, I remember them talking about acid rain
13	destroying the forest. And then about ten, 15 years
14	later, Al Gore came around, and it was global
15	warming. And then we get some 35-below weather.
16	Then they come up with climate change. I believe
17	the environmentalists are destroying our way the
18	American way of life with the automobile, with
19	fossil fuels. And I think solar panels are a joke,
20	and I don't like looking at windmills either. And
21	that's my thoughts on that. Thank you.
22	AUDIENCE MEMBER: I beg your pardon,
23	we're having a meeting here.
24	MR. SCOTT EK: Sorry, I had to grab some
25	rule books. I wanted to look at something.

1	MR. BILL STORM: Scott's going to do some
2	research while I continue.
3	Okay. Thank you very much. Anybody
4	else? Show of hands.
5	Sir, please step to the mic. State and
6	spell your name, please.
7	MR. BRUCE AUBOL: Do we need this?
8	MR. BILL STORM: Yeah, give it to me
9	because I can track it.
10	MR. BRUCE AUBOL: Thank you.
11	MR. BILL STORM: Thank you very much.
12	Thank you, Bruce.
13	MR. BRUCE AUBOL: My name is Bruce Aubol,
14	B-R-U-C-E, A-U-B-O-L.
15	Some questions more so than comments.
16	I'm going to assume that the land is currently zoned
17	as ag, taxed as ag. What classification will this
18	land go under, and what rate of tax will it go under
19	once it's a solar field?
20	MR. BILL STORM: I don't know the answer
21	to that. But, Xcel or National Grid, anybody have
22	anyone want to take that up?
23	MR. BRUCE AUBOL: It would be nice to
24	know.
25	MR. BILL STORM: Well, I will address it.

1	We will we will address that for you.
2	MR. JEREMY DUEHR: Thank you. Jeremy
3	Duehr, J-E-R-E-M-Y, D-U-E-H-R.
4	And I'm actually the attorney for
5	National Grid. I've been working in the renewable
6	industry since 2005. So in solar what happens is
7	it's reclassified from ag to commercial-industrial.
8	So the classification rate changes. So it's taxed
9	at a higher classification rate. So there's more
10	tax money that's going to go to the county because
11	of the change in classification. Does that answer
12	your question?
13	MR. BRUCE AUBOL: That answers that
14	question. Thank you.
15	MR. BILL STORM: Please continue.
16	MR. BRUCE AUBOL: Another question would
17	be what is the current megawatts produced by the
18	current Sherco operation? Say, Plant 3 that will
19	operate the longest.
20	MR. RANDY SEELEY: 2450, all three units.
21	MR. AARON BRIXIUS: 2300, 2400 is our
22	interconnect capacity limit.
23	MR. BRUCE AUBOL: Just for the sake of
24	ease, I'll go to 2500. This is 460 megawatts. Are
25	there another four plants planned to replace that

loss of energy?

MR. AARON BRIXIUS: Yeah, so we file a resource plan approximately every two years. Oh, sorry, Aaron Brixius, A-A-R-O-N, B-R-I-X-I-U-S.

So we do a resource-planning process approximately every two years, where we file with the Public Utility Commission what our plans are for the assets that we have, the assets that are retiring, and the replacement assets that will come in. So I think that some of the comments that have come up today is around the alternate plan that we filed that did not have the Sherco combined cycle in it. So that resource-plan filing, the preferred plan that we have out there and the alternate plan, has the options in front of the Commission that we're recommending for replacement generation as the coal units cease to operate.

MR. BRUCE AUBOL: Is there a planned cycle for this, or are we going to add another, say, 500 each year to gain back the 2500? My concern is supply. We're being encouraged to plug everything in instead of burn something. In reading there's legislation that is afoot that people would like to replace home furnaces that burn natural gas or propane by just plugging in electrical. That's

gonna take an awful lot of electricity if you're gonna start throttling down coal plants and not build nuclear plants.

MR. AARON BRIXIUS: Yeah, there's a variety of scenarios that they run in the resource-planning model, and they have different electrical vehicle adoption rates, different electrication of other things just to get different load profiles with what the generation resources may need. And then we work with the Commission other stakeholders to verify what the most likely scenario is for the amount of load that there is out there and then match the generation resources to be able to meet that load need.

MR. BRUCE AUBOL: Is it wise to match it, or are you planning to expand it?

MR. AARON BRIXIUS: Yeah, so there's a combination of how we're required to match and/or seek resources from the larger market. So they don't require every generator to match 100 percent of their needs to resources, say, from within that area. They look at the entire MISO market and the regional zones to make sure that there's enough generation within those zones to be able to supply the needs in the area.

1	MR. BRUCE AUBOL: Is Xcel rolling the
2	dice on mostly solar, or are they also going wind,
3	we'll say, in this area?
4	MR. AARON BRIXIUS: I wouldn't say we
5	roll the dice on anything. I think
6	MR. BRUCE AUBOL: Well, from a from a
7	public point of view, something is substantial and
8	requires electricity. There's it's pretty easy
9	to lose faith in, we'll call it the system. Just
10	because something new comes along, it doesn't mean
11	that everyone's willing to chase it.
12	MR. AARON BRIXIUS: Yeah, I think
13	reliability is a top concern for us. And there's a
14	fair amount of skepticism, within all the different
15	levels of our company, of every technology that we
16	look at and making sure that it's been vetted.
17	We're not doing first-of-a-kind type of technologies
18	and implementing them and relying on them to be able
19	to meet our needs.
20	MR. BRUCE AUBOL: Okay. Thank you.
21	MR. BILL STORM: Thank you, Xcel, and
22	thank you, sir.
23	Okay. Show of hands again. I encourage
24	people at this time to ask questions, voice your
25	concerns. Anybody? Any takers?

Yes, sir, please step to the mic. State and spell your name.

MR. RUSS ARMSTRONG: My name is Russ Armstrong, R-U-S-S, Armstrong, pretty good phonetic spelling.

I've lived here 30 years. I grew up in South Dakota, to the extent that I grew up, which my wife doesn't think is very much. I came to Becker because I wanted this community for my kids to grow up in. When we came here, I think Becker's population was 900, and correct me if I'm wrong, I think it's now 4500.

AUDIENCE MEMBER: 48.

MR. RUSS ARMSTRONG: 48. So people are describing -- the mayor described, Becker has plans to grow, and one of the places apparently we would want to grow is across the tracks. Maybe we could get rid of the tracks. I doubt that. But if we've gone from 900 to 4500 in 30 years, we're gonna go from 4500 to, what, 50,000? If we -- if this attractive community keeps bringing people in who want to live here at the same rate we've been doing for 30 years, we're gonna keep growing. People like it here, and our growth has gotta go someplace. if we're gonna take 3500 acres and not be able to

expand there, where are we gonna go? I don't know if that's being considered. I'm putting it forward as something that should be.

Second, where do they make the solar panels? What nation?

MR. RANDY SEELEY: Good question.

MR. RUSS ARMSTRONG: China? Taiwan?
Where is that national interest that is now coming
to the fore? We're not as powerful a country as we
used to be. Are we gonna be dependent upon China
for our power?

Third, the gas plant, the turbine-powered plant that was going to replace the coal plant was -- that's what everybody thought was gonna happen for the last I don't know how many years. And if you didn't see a lot of interest in your plans for a solar field early on, I don't think it came to our attention that Xcel was gonna back out of its commitment for that gas plant, so we weren't as worried about what we were gonna do. And now all of a sudden, we've been blindsided and were told, instead of having a reliable gas plant, we're gonna get electricity when the sun shines.

Fourth, if I'm incorrect, I apologize.

But people are saying the plant that we were

supposed to get here is gonna be in North Dakota; is that right?

AUDIENCE MEMBERS: Yes.

MR. RUSS ARMSTRONG: What are the line losses? How much electricity are you gonna lose sending our electricity that we get in our homes all the way down from, where, Minot? And what's the expense of carrying all that? Couldn't it be used elsewhere? I think that's it. Thank you.

MR. BILL STORM: Thank you. Okay, I'm gonna go around again. Again, I encourage you. This is the moment -- one of the moments. You'll have other moments down the road. But anybody else want to take the opportunity to speak on the record tonight?

Sir, please come to the mic. State and spell your name.

MR. RICK HENDRICKSON: Good evening. My name is Rick Hendrickson, H-E-N-D-R-I-C-K-S-O-N.

I serve on the city council with Mayor

Bertram, and I agree with a lot of the comments

tonight. For the sake of everybody, I will not

repeat them. I'd like to just maybe touch on one

point that hasn't been really brought up here

tonight so far, and that is one of the rebuttals to

what -- we've had plenty of discussions about the siting of the -- where the -- you know, the proposed siting. And one of the rebuttals is that, well, those could be moved if needed. Although it's true, I'd like to just look at that from a practical standpoint.

And, you know, when you think of a large company that's gonna come in and possibly site near here in Becker or in the area here, when they're siting, they often have -- they have site selectors. And they have several sites picked out around the country, and those are usually greenfield, brown-field type of scenarios. And so if they were to, let's say, select a location here that currently has a solar field on it, could that be moved? Yes. But when we're competing against other locations that have -- that don't have 18 -- you know, 12 to 18 months worth of utilities that need to get uprooted before they can start building, that puts us at a disadvantage already.

So wherever this location -- you know, wherever these fields end up, pretty much that's where they're gonna stay probably. I mean, they technically can be moved but, from a practical standpoint, most likely not. You know, there's very

1	few rarely would there be a company that's going
2	to come in and say, yes, I'm willing to wait for you
3	the 12 to 18 months to uproot 'cause I want to go on
4	that specific field. When they're a large company,
5	they got locations all around the country where they
6	don't have to do that. I just even though that
7	is technically true, I'd just like to consider that
8	as a response to the rebuttal. Thank you.
9	MR. BILL STORM: Okay. Thank you. Back
10	to the pool again. Anybody?
11	Sir, please step to the mic, and state
12	and spell your name.
13	MR. STAN HERKENHOFF: My name is Stan,
14	S-T-A-N, Herkenhoff, H-E-R-K-E-N-H-O-F-F.
15	I just got one question, and maybe
16	somebody can answer. People have touched base on it
17	a little bit, but we had the bipartisan agreement
18	that Governor Dayton signed that the gas plant was
19	going to come here. What happened to that? Why is
20	it not coming here? Why is it going to North
21	Dakota? That's all I have.
22	MR. BILL STORM: If you'd like, Xcel, you
23	can address that if you want.
24	MR. AARON BRIXIUS: So I probably don't
25	have all of your answers. I have a little bit of

knowledge of the project, not so much around the regulatory planning part, but I was actually -- I am project manager for the combined cycle project as well. We have rescinded the project. There's an alternate plan filed. So there's a preferred plan and the alternate plan that was proposed.

So right now the major issue is gas pipeline, gas infrastructure, and the general population's opposition to running new gas pipelines throughout the state. That's why the Fargo location is being proposed, is because it's right next to a gas pipeline versus here, and their different size and different types of technologies for facilities as well. So that's kind of the general -- my knowledge of the situation around that. I don't know if that answers the question.

MR. STAN HERKENHOFF: Didn't they know that back then?

MR. AARON BRIXIUS: I don't think that there was quite as much as opposition. I think Line 3 definitely made people more aware to how much that could delay a project to the point where it would be canceled.

MR. RUSS ARMSTRONG: Could I ask, is that local opposition, or is that national opposition to

1	gas pipelines?
2	MR. AARON BRIXIUS: I can't speak I
3	can speak to we had over 6,000 comments
4	MR. RUSS ARMSTRONG: From where?
5	MR. AARON BRIXIUS: In our plant. Again,
6	I don't read them all. I don't read all of the
7	comments. We can talk about with our regulatory
8	folks where they came from or we had over 6,000
9	comments negative around the gas line. And that's,
10	I think, one of the reasons why additional looks at
11	other ways to meet that need were looked at.
12	Again, this project was not part of that
13	alternate plan. It was already in the works prior
14	to it coming out of the 2015 resource plan, which
15	the order from the Commission told us to go and find
16	at least 650 megawatts of solar coming out of that
17	resource plan. So this project isn't tied to the
18	recent filing. It was in the works already. So
19	some of the questions around is this going to
20	replace that, this was preceding that.
21	MR. BILL STORM: Okay. Please state and
22	spell your name again, sir.
23	MR. JAMES NEWBERGER: Thank you. James,
24	J-A-M-E-S, Newberger, N-E-W-B-E-R-G-E-R, former
25	state representative of house district 15B.

I would like to clarify for everyone that's here. I was there from the beginning. There was no alternate site. This was the site. So I don't know where you're getting your information, but I would highly recommend you go back and look at your sources because I was there. And the reason why this site was chosen is specifically because we wanted something that was PUC friendly. The ability to get an alternative site in Minnesota was zero. So what you're saying -- I'm not going to put words in your mouth.

24

25

The only site that was approved by law -this wasn't a recommendation. This was signed into law -- was right here in Becker, Minnesota to help offset the job loss and the economic impact when they took Sherco down. Governor Dayton signed that bill. Now, the other comment came up that the general population doesn't want gas. Yeah, the general population of the metro. Greater Minnesota, absolutely not. We welcome it. And there are two -- if I remember correctly, there are two major pipelines, the Gopher Line and the Viking line. Correct me if I'm wrong. Those are the two that -one of the two that we could've tapped into. of them would've been adequate supplies.

The problem is, is that Xcel Energy lost They don't want to stand up to the environmentalists in Minnesota. They don't want to stand up to Melissa Hortman, the speaker of the house, who is hell-bent on shutting this project down because for some reason she believes there's a bubble over Minnesota and if we keep our gas plant out, then our air will be fine. But Xcel Energy, now I understand why you're doing it. You're going to North Dakota, why? It's a red state and they're gonna welcome you. You're not going to have to jump through half as many of these hoops. I get that, but it doesn't change the fact that this city has been thrown under the bus. What greater commitment can you get outside of something carved in stone by God than a law -- than a bill that's signed into the By law put the gas plant here. Now it's gone. I am just beyond words. MR. BILL STORM: Yes, sir, please state and spell your name. MR. GREG PRUSZINSKE: Greq, G-R-E-G, Pruszinkse, P, as in Paul, R-U-S, as in Sam, Z-I-N-S-K-E, city administrator, Becker, Minnesota. So we were just having a little

conference here.

Bill, earlier in the conversation,

you had made a comment that local units of government hadn't commented on the docket, and I'm not really sure exactly the context of that. But I did want to make sure that it's captured for the record that we have commented. I was just taking a look here at one of those comments, May 18th, 2021, and it was on the Docket Numbers 189, 190, and 191. So I just want to make sure that that's clear and captured in the record. We have commented. We have been part of the process, and we will continue to do that. So that's all I have.

MR. BILL STORM: Thank you. Okay, back to the pool. I'm encouraging anybody, going once --

Okay. We'll go with this one first and then you, sir. Please step to the mic, and state and spell your name.

MS. WANDA HERKENHOFF: Wanda Herkenhoff, W-A-N-D-A, H-E-R-K-E-N-H-O-F-F.

One of my concerns is like California with their rolling blackouts because of lack of energy. When it's 30 below, I don't think we want rolling blackouts here, and I think that should be a big consideration. And also, I'm with Randy. I don't really like looking at solar panels, especially going down Highway 10, et cetera. So

1 rolling blackouts, not good. 2 MR. BILL STORM: Reliability 3 MS. WANDA HERKENHOFF: Right. MR. BILL STORM: Okay, there was somebody 4 5 in the back. Please step to the mic. State and spell your name. 6 MR. GARY GRAY: Gary Gray, G-A-R-Y, 7 8 G-R-A-Y. 9 I'm a lifelong resident of Clear Lake I've been on the Clear Lake Township 10 Township. board for 17 years. Currently, I'm the township 11 chairman, and we've supported every solar farm 12 that's came across our desks as a township. 13 seen the benefit not only to the township but to the 14 15 landowners. And as the supervisor of the town board, 16 17 we support our landowners and what they want to do. 18 And in Sherburne County, solar farms are a permitted use. We're here basically to talk about the 19 environmental issues that come about from solar, and 20 21 we've seen the benefit from a renewable-energy

standpoint. We've also seen from the standpoint of

the nitrate levels in water in Clear Lake Township

that will not be pumped over the course of a solar

and the hundreds of millions of gallons of water

22

23

24

25

farm of this size, plus all of the thousands of tons of fertilizer that will not be put onto the ground.

We are an agricultural township, and we plan on staying that way. And we support all of our farmers, myself included as being one, to do what they want with the land to their benefit. And Clear Lake Township has been at the forefront of this because we were the early parts of solar farms in here. We were contacted early on in this by National Grid on the west side 'cause that's where National Grid -- to clarify this, National Grid is on the west side. Xcel Energy has signed up everyone on the east side, and they came to the game later in the date. They weren't at the same time frame.

And from a standpoint of locking the City of Becker out, let's just -- you know, I represent all of the residents of Clear Lake Township, unlike our two state representatives that are here and our past representatives. They have not once thought about asking Clear Lake Township what we think of the project. They've never showed up at our doorstep. The City of Becker has said they have plans to expand. The City of Becker has never contacted Clear Lake to expand into Clear Lake

Township at all ever in 17 years that I've been on 2 the board. And I just want to make sure that we 3 understand that Clear Lake Township is here, and we 4 support every solar farm, and this is no different 5 going forward. It's just a larger solar farm. 6 We see huge benefit to our landowners and huge benefit 7 to the township, and I just want those comments to 8 9 be put into play. MR. BILL STORM: 10 Thank you, sir. Yes, sir, state and spell your name. 11 12 MR. GREG PRUSZINSKE: Again? 13 MR. BILL STORM: Again. MR. GREG PRUSZINSKE: Greg, G-R-E-G, 14 15 Pruszinske, P, as in Paul, R-U-S, as in Sam, Z-I-N-S-K-E, city administrator in Becker. 16 17 Just for the record we have had some conversations with one of the town supervisors of 18 Clear Lake. We had talked about an orderly 19 20 annexation agreement, at least two conversations 21 with one of those township supervisors. So I just want to capture that for the record. 22 23 MR. BILL STORM: Okay. Thank you. Okay. 24 AUDIENCE MEMBER: Ask him when. MR. GREG PRUSZINSKE: 25 Ask Bud.

1	MR. BILL STORM: Okay, I don't want to
2	have the group fighting among themselves. We have a
3	public hearing for that.
4	MR. BILL STORM: Okay, coming back to the
5	pool. Going once, twice, third
6	Okay. Please state and spell your name.
7	MR. ROSS IMHOLTE: My name is Ross,
8	R-O-S-S, Imholte, I-M-H-O-L-T-E. I am one of the
9	landowners in this. I also am for it, and to say
10	that the city has talked to me, yes, they did. They
11	talked to National Grid prior to talking to me about
12	a setback for buying land for their utilities that
13	they want to put in. That came after the fact of we
14	had it signed up approximately two years ahead of
15	that. So they have talked to me. It was after the
16	fact. I've tried to reach out to the city since,
17	and I'm being told they didn't know their next move,
18	so. Thank you.
19	MR. BILL STORM: Thank you. Okay, once
20	again into the pool. Anybody want to comment, ask a
21	question?
22	Sir, state and spell your name, please.
23	MR. RUSS ARMSTRONG: My name is still
24	Russ Armstrong. I'm not sure how potatoes are grown
25	because in South Dakota we just grew corn and

1 alfalfa and oats, beans. But I see crop dusters, 2 and I -- I take it that that's an integral part of farming in this community. I'm wondering if the 3 chemicals that the crop dusters use would be an 4 adverse impact on the solar panels and, if that is 5 true, if the crop dusters would be restricted in the 6 area around the solar panels? I'm just -- I'm just 7 doing a what if here. But I wonder if that's been 8 9 considered as part of the environmental plan, and if not, it should be. 10 MR. BILL STORM: Okay. We can certainly 11 look at drift from crop dusting and its potential 12 13 impact. MR. RUSS ARMSTRONG: And drift, yeah. 14 15 MR. BILL STORM: Okay, back to the pool again. And I do appreciate them all. I encourage 16 17 you people to ask questions. Going once --18 MR. RANDY SEELEY: You never did answer where are these solar panels made at? The chemicals 19 20 that are into them, where are they made at? 21 country? 22 MR. AARON BRIXIUS: So we haven't ordered 23 the solar panels for this project yet, so we don't have the source of origin I can point to. 24 25 look at industry specifics on where they get

1	produced. They get produced in, yes, China. They
2	get produced in South Korea, Malaysia, Vietnam,
3	India, the United States of America. There are many
4	countries that produce them, and we can follow up
5	after we've ordered panels on specifically where
6	these would be sourced from.
7	MS. WANDA HERKENHOFF: Well, it's too
8	late then.
9	AUDIENCE MEMBER: Yeah.
10	MR. BILL STORM: Well, if the
11	information's available by the time I release the
12	EA, I'll include it in the EA. If there's not,
13	we'll just include a generic statement about where
14	they we'll look at where they're produced around
15	the globe and incorporate that information in the EA
16	so you can get a sense of the countries that are
17	producing the solar panels.
18	Okay, back to the pool again. Again, I
19	encourage you. I've got all night.
20	MR. MARK KOLBINGER: Ten seconds
21	MR. BILL STORM: Sure, yep.
22	MR. MARK KOLBINGER: Mark Kolbinger,
23	K-O-L-B-I-N-G-E-R.
24	Based on the letter dated August the 26th
25	from the Department of Commerce to the Public

Utilities Commission with the words I indicated 1 2 earlier, do you have any comment from the Department of Commerce about Xcel's inability to give you 3 timely accurate information? 4 Specific to the letter 5 MR. BILL STORM: that you wrote, I'm not familiar with --6 I didn't write it. 7 MR. MARK KOLBINGER: MR. BILL STORM: Not that you wrote but 8 9 the letter that you referenced, sorry. The letter that you referenced, I'm not sure what docket that 10 was in. In the Department of Commerce -- there are 11 different divisions in the Department of Commerce, 12 one division that deals with forecasting and need 13 and the issues around whether a project is needed, 14 15 and then there's our group, which assists the Commission in the environmental evaluation and 16 17 gathering the objective data that goes into the 18 environmental document, whether it be an EIS or an So I can't speak specifically to your comment 19 EA. because I don't know the docket. I don't know the 20 21 context of how that came up, so. 22 Okay, we're back again. Going once, 23 twice, okay, third time. I really appreciate everybody coming out. 24 25 Remember, your comments -- get your comments to me.

1	If your comments are about your concerns, great.
2	Get them to me. If you have issues, put them in
3	your comments so I can address them. Also, during
4	the comment period, if you have questions, my card's
5	on the table. Give me a call if you need help in
6	working your way through a comment. Feel free to
7	call me, and we can talk about it. Other than that,
8	I do appreciate you coming out. Okay, that's it
9	then.
