FACILITATOR: Good afternoon, everybody. Please come down to the tables. We'd like to get started with the public comment period. So if everybody wants to gather here in the next minute or so, we will get started.

We're going to start the public comment period in about a minute. If you folks want to come take a seat at the table, we'll get started soon.

Good morning, everybody. Thank you so much for coming out on such a beautiful day. The good news is we're air conditioned inside here.

My name is Patrick Field. I'm the facilitator for today's public comment session, and I'm part of the consultant team working on behalf of the State of Minnesota.

What we want to do is we have a very short slide show, just a few slides, to kind of set the stage, and then we're going to open it to public comment.

So first I want John Wachter -he's the manager of Environmental Review for
the Department of Commerce from the State of

Minnesota. He's going to give us a short welcome and introduce us to the process and where we're at. I'm going to hand the mic to him. I know the acoustics are a little tricky, so we'll do our best here.

MR. JOHN WACHTER: I'm going to do about a two-minute overview of what we're doing here today and then I'm going to turn it back over to Patrick.

The reason we're here is because Enbridge applied for -- I'm going to talk louder. All right. This is really awkward, but this is what I'm supposed to do.

So Enbridge has applied for two permits from the Public Utilities Commission.

The first one is the certificate of need. The second one is a route permit. The first one is a determination of whether the project is needed at all. That's a yes or no, more or less. They can put conditions on it, but more or less, a yes or no.

The second one, if it's needed and the Commission makes a decision that it is needed, then where should it go. That's the two decisions with the two permits that

Enbridge has applied for from the Public Utilities Commission.

Before the Commission can make a decision on either of those permits, they have to do, they have to do an Environmental Impact Statement on the project, where we try to look at the environmental impacts of the proposal, of the potential alternatives, whatever mitigation, whatever things could be done to reduce the impact of the project, and that's where we are now in the process.

Before the Commission can make the decision, we're doing the Environmental Impact Statement. The Environmental Impact Statement covers both decisions in one project. So it's a little bit complicated because of that reason.

We've got -- part of the EIS covers the alternatives that are going to be looked at in the Certificate of Need process, and part of it looks at the alternatives that are on the route permit decision process.

So the process, as it goes through, the application comes in. We have to do -- the Public Utilities Commission

delegated the EIS to the Department of Commerce.

We're working closely with the Pollution Control Agency and the Department of Natural Resources on the EIS.

Once that's done -- we're in the draft EIS stage right now. That's what we're talking about today. We've got a draft EIS out. We're looking for input on the draft EIS, and I'm going to talk about that in a little bit more detail in a minute.

Once the draft EIS comment period is over on July 10th, we'll go back, make the changes that we think are needed to the document, and then we'll release it as a final EIS.

And then after that, there's a formal contested case hearing that's conducted by an administrative law judge, who will do a formal hearing with more public comment.

There's another chance for public comment during the hearing process. And then that's going to be this fall.

The hearing process will be starting this fall, and then after that the

judge will make a recommendation on both permits for the Public Utilities Commission for their final decision.

We expect that decision to be sometime in the spring of 2018.

So the one thing I forgot, the chances, the opportunities for public comment are now. It happened during the scoping process, now during the draft EIS process.

When the final EIS comes out, there's a two-week comment on whether we did a good job of adequately capturing the information the Commission needs to make their decisions.

During the hearing process the administrative law judge will also allow comment. This process is all about do we have the information right.

The EIS process is not -- we're not here to make any decisions today. The EIS doesn't say anything about what should be done. We're just trying to make sure we've got the information the Commission needs to make their decision right.

But the hearing process that

comes this fall will be about what's the best thing to do.

So if you want to make arguments about what the decision should be, it's really more at the hearing.

Today's more about do we have the information right.

So there's lots of different ways to make comments on the Draft EIS. You can make them -- you can do them verbally today and Patrick's going to facilitate an open mic verbal comment period in a minute here. You can give your comments.

If you'd rather not -- a lot of people don't particularly enjoy public speaking. If you want to give your comment to a court reporter, there's a court reporter outside the door that can take it privately, if you want to do that.

There's comment forms throughout the room here that you can fill out. You can always, of course, email, mail, and use our online tool to submit comments through July 10th. You know, we're looking -- formally, we're looking for comments on the

1 EIS.

For most people it's pretty tough to read a 3,000-page document and have a lot of comments on it. So if there's things that you -- if you haven't had a chance to study it -- if there are things that you think are important to you that you want to make sure that we know about, that's certainly something we can talk about, too, today.

I'm going to turn it back to Patrick.

FACILITATOR: So I see the room is actually shifting this way so I'll come through over here.

I'm just going to walk through the process for the comments. As John said, we have a court reporter. If you want to give your individual comments, she's happy to take your comment and it'll go right into the record to the full public.

Written comments go in the boxes there and I'll be submitting that after today.

So for today, the way that we have generally handled public comments is we ask for people to put their name in the

speaker registration. I've got about five or six cards.

We allocate the time we have across that. So people can probably speak up to six or seven minutes. I'll show you a clock in just a second. We do ask people, as best they can, to direct their comments towards the draft EIS; things you like, things you don't like, things you think are missing or that should be improved.

We ask that people be respectful of the speaker. Anybody that wants to speak, we want to make sure they have a voice and they are listened to.

So when the commenter is speaking, if folks could listen, that would be most appreciated.

If people want to be affirmative about a speaker, that's fine. We ask people to not be negative about a comment. We may not agree, but that's okay. You probably don't.

But it's important that we allow everyone to give their opinion and have respect, whatever it may be. We do ask that people direct their comments at the the EIS, at the issues, at organizations, agencies, et cetera, but not at individuals.

We want everyone in the room to feel comfortable, so we prefer you not direct comments to specific individuals in the room but really to the issues at hand.

The State Agency's role for this comment period is to listen. So as you know, there are folks sitting in chairs now at the poster board sessions. People are here to listen.

Raise your hands, folks, to see who's in the room.

And we've got a terrific court reporter who's going to capture your every word that's going into the record.

After July 10th, the transcripts of these comments will be available online for all of you. And of course, they go through the process of the state as they analyze and move forward from the draft to the final EIS.

Take your cell phones, put them on do not disturb, vibrate, whatever it is,

just so don't hear your lovely ring right in the middle of the meeting.

And I don't think we'll have any problems finishing on time.

With that, I'm going to read off the names, and be mindful of the basic ground rules.

Andrew is going to pull up a clock, a small timer, and you can see how you're doing. It's a little smaller crowd, we can go a little longer, somewhere around six and a half minutes.

If you're still talking, I'll stand up. That'll be the signal to begin your wrap-up, to try to encourage you to finish up.

The acoustics are not perfect so if we can't hear you, we'll let you know.

Leslie, right there, is going to help run the mic for us. We'll bring the mic to you so you're comfortable. You can stand or sit as you comment, no problem. We'll bring the mic to you.

State your name and spell it for the court reporter, if you could. And sometimes when I pronounce names, I pronounce

1 them terribly, so you can correct me, as you will say your name better than I can. 2 So the first commenter, state 3 your name and spell it for the record, sir. 4 5 MR. LEOFWIN LINDBLOM: L-E-O-F-W-I-N L-I-N-D-B-L-O-M. 6 7 I have a background in chemical 8 engineering, and I was responsible for the 9 International Falls treatment system some years 10 ago. 11 I am concerned about petroleum getting into swamp lands, wetlands, and 12 13 ultimately getting into aquifers. Once the petroleum gets into an 14 15 aguifer, it's there forever. And from the spill it can move many miles in the aquifer, 16 and the only way to handle the taste and odor 17 18 of petroleum in the aguifer is activated And very few units, treatment units, 19 carbon.

One way to avoid a spill getting into a wetland would be double containment.

And OSHA is working on getting double

they had to install activated carbon, it would

have activated carbon systems involved.

be a long delay.

20

21

22

23

24

25

containment in all the chemical plant systems. 1 And double containment would 2 double the cost of the pipeline and give a 3 double cost of petroleum for a pipeline 4 5 regardless of just the material cost. And self containment would be an 6 7 additional cost for the instrumentation to determine if a leak occurred. 8 9 Thank you, sir. FACILITATOR: 10 Appreciate it. 11 I'll speak into this one. We 12 have Judy Carpenter. We'll bring the mic 13 right to you, and state your name and spelling for the record. 14 15 MS. JUDY CARPENTER: J-U-D-Y, 16 last name, C-A-R-P-E-N-T-E-R. I'm speaking on behalf of the 17 18 Ottertail County and (indiscernible) group, a 19 pro clean energy advocacy group. My concern regarding the Draft 20 Environmental Impact Statement for the 21 proposed expansion and reroute of the Line 3 22 23 pipeline is that it fails to establish a need 24 for the proposed project as well as account 25 for numerous risks this project possesses to

the environments in Minnesota.

The DEIS fails to adequately account for the climate impacts of extracting and burning an additional 400,000 barrels per day of tar sand.

A recent National Academy of Sciences report found that cleaning up a tar sand spill in a waterway is much more difficult and up to 14.5 times more expensive than cleaning up a non-tar sand oil spill.

Enbridge has a history of spills and greater scrutiny is needed for spill cleanup. Permanent damage to waterways impact Minnesota's economy and is a threat to the Ojibwe wild rice rights.

I reviewed the applicant's preferred route map online and three of the route alternatives that they have online. I've also looked at the ones on the posters today.

Many of these routes would cross and jeopardize Minnesota's irreplaceable water sheds and waterways.

The Canadian company Enbridge should create a route to transport the oil sludge across Canada. Minnesota should be

1 focused on growing our economy by developing clean energy and renewable resources. 2 I urge the Minnesota Department 3 of Commerce to reject all pipeline construction 4 5 in Minnesota. FACILITATOR: Karen Heller. 6 Name 7 and spelling for the record. 8 MS. KAREN HELLER: K-A-R-E-N, 9 H-E-L-L-E-R. 10 Has anyone seen the map that shows where the proposed new Enbridge pipeline 11 would cross Wadena County? I tried to get one 12 13 at the zoning office on Wednesday, but they didn't have one. 14 15 But there is one over on the 16 table here, and it shows you that it does go through Wadena County right near Huntersville. 17 18 I live on the Koch pipeline that already goes through Wadena County. It has four lines 19 20 there. Enbridge has six already going 21 22 through up north. 23 For the last 48 years we have 24 been very happy with the company that takes 25 care of it. They go out of their way to treat

the landowners right. They check and repair potential weak spots every year. But you don't get that with Enbridge Energy. They have one of the worst records for environmental degradation in the business.

They care very little for the people affected by their hasty workmanship resulting in destruction of property, bullying attitudes, and disregard for cultural values.

Also, there's some manipulative tactics such as trying to avoid Line 3 by just abandoning it and moving to a new clean place.

The only environmental issue Enbridge is worried about is the business climate through the project area.

So what is a Certificate of Need?

Do we in Wadena County need their business?

No. We need them to stay out of our wilderness, camping areas, lakes, rivers, and quality groundwater reserves.

And what is the route permit?

Enbridge should be mandated to clean up the existing Line 3 before getting anymore permits to pollute.

And in conclusion, all the data

and paperwork in the world cannot clean up a spill of toxic tar sand slurry from a pristine wetland.

FACILITATOR: Thank you, Karen.

I have Steve Roe.

MR. STEVE ROE: My name is Steve Roe. S-T-E-V-E, last name R-O-E.

I'm here on behalf of the Pine
River Watershed Alliance today. I live on the
Whitefish chain of lakes. And I am probably
ten miles south of the proposed route.

The route north of me crosses very sensitive flow leak areas. There are no less than 13 creeks, rivers, streams, flowages that flow from the pipeline route into the Pine River through the Whitefish chain of lakes.

I am a professional engineer, educated at the University of Minnesota. I'm civil. I learned about hydraulics, hydrology, and pipe stress while I was in school, which it was kind of interesting to resurrect some of that education.

I will say, and I will make a claim, that the pipe that they intend to use

is an inadequate design for the pressures that they intend to run in.

It's somewhere over twice -they're running the pressure at over twice
what it probably should be.

When you read about the failures, the incidents, the stress cracks, and so forth, and they don't repair them, the stress cracks represent structural failure of the pipe.

I'm sorry, but I really get upset when I think about what we might do to ourselves.

All spills occur along the pipeline and the frequency is alarming.

Many of them occur in the pump stations, but somewhere along the line, every 15 to 30 miles, there is a spill every year. You can prove that by going in and looking at the PHMSA reports.

We develop tremendous safety protocol around pipelines because spills and ruptures have become the norm.

Why do we accept that? We can run these pipes at probably half or less of

pressure and have a much better outcome.

I believe that in most cases in the state of Minnesota, public buildings, public structures, structures that occur in the public domain are required to have a Minnesota registered professional engineer sign off on them.

Why is that not true with this pipe?

By the way, those engineers should not be either retained or employed by the pipe owner.

Good judgment -- everyone says to me, well, it's designed according to the federal specification. One thing in the federal spec that is implied is good judgment. And I think that this product should be installed with good judgment.

The other issue is that they're going to run it in the proximity of a high voltage power line. The induced current in this pipe could be life threatening to the people that are maintaining the line.

I have already witnessed a dairy farmer put out of business by stray voltage

1	because of the pipelines and transmission
2	lines which changed a product, i.e.,
3	electricity.
4	I thank you all for listening,
5	and I'll talk to you another time.
6	FACILITATOR: Thank you, Steve.
7	And Allen Richardson next.
8	Allen, name and spelling for the record.
9	MR. ALLEN RICHARDSON: Good
10	morning. My name is Allen Richardson,
11	A-L-L-E-N, R-I-C-H-A-R-D-S-O-N.
12	I'm here to speak on the issue
13	of pipeline abandonment as regards to the
14	overall political scenario that we find
15	ourselves in.
16	You know, there's a lot of
17	common ground to be had on this particular
18	question, and I've delivered these remarks
19	several times over the course of the week.
20	And I'm gratified to the Duluth
21	Tribune for having a nice article in today's
22	paper on that topic.
23	What it boils down to is that
24	there are many landowners in Minnesota who
25	have graciously hosted Enbridge pipeline for

decades, and many of them are saying that if Enbridge Line 3 is to be decommissioned, that Enbridge should be liable for removing, physically removing that pipeline.

And so that's really the central question. What we're advocating for is landowner choice, and so basically in a situation where the soil conditions and the ground conditions are appropriate.

If it's physically and scientifically possible to remove a piece of abandoned pipeline, then it should be up to the landowner, individual, private property owner or state county tribal land, that they should be able to have that pipeline physically removed at Enbridge's expense.

Pretty straightforward to ask.

I think it speaks to Minnesotan common sense.

And you know, we know that there are a lot of union jobs to be had out there doing that work. Certainly we agree that that is the community that is most qualified to do that work with those pipelines.

I will say that I don't think the DEIS has done this process any favors by

sort of issuing this blanket statement that in general the pipelines are ten to fifteen feet apart.

Mr. John Munter of Warba took it upon himself to measure the distances between those pipelines in the proximity of what we know to Grand Rapids on publicly named thoroughfares and found on average there's 30 feet of space between lines 3 and 4.

So from what we're hearing, I think we're seeing, in this question, the profile of this particular part of this public debate is only -- is only going up, which is to say we heard a lot of support for the idea of this question of what to do about abandoned pipeline to be conclusively resolved before any permitting takes place.

So you know, we're going to need some more scientific data on the proximity of these pipelines to each other. What is actually technologically possible, based on the best science that is available?

And so we're asking for the support of the general public and we're hoping that PUC and related entities will provide a

substantial amount of additional data on this question.

And that's it. Thanks for your time.

FACILITATOR: Thank you, John.

Those are the cards I had. We want to make sure if there are others who want to speak, that this is the time to do so. So if there are others who would like to make a public comment, just raise your hand and I'll call you forward -- name and spelling of your name as well.

MR. ANDY PEARSON: Thank you -hello. My name is Andy Pearson, A-N-D-Y,
P-E-A-R-S-O-N.

Thanks for the chance to comment. So I have two points today that I want to make. One is the technical and one is a little less so.

To start with the technical one, one of the things that I really appreciate about the Draft Environmental Impact Statement is the climate modeling section where it does calculate out the social cost of carbon as being \$50 something billion and \$287 billion,

depending on the displacement of oil in the pipeline, as in how much oil this pipeline offsets that's currently being transported now by other means.

I will say, and I've said this before, that the 30-year time horizon is short and that it needs to be at least 60 years, because there's strong precedent in Minnesota for Enbridge operating that line. So I believe the numbers are understated right now.

But the second point about that, is that in addition to changing the timeline, I would encourage the Department of Commerce to explore modeling with partial displacement, because I believe that that is what the Enbridge company is actually proposing here; unless I am confused.

It appears that Enbridge is proposing to stop the operation of the current Line 3 and to begin a new pipeline, which would, in theory, carry some amount of the oil that's currently going on Line 3; essentially what Line 3 is carrying now plus an additional 370,000 barrels per day of primarily heavy crude.

And I didn't see that addressed in the climate section. I saw only no displacement or full displacement, when it appears the company's been, in fact, proposing from the beginning partial displacement.

So I would encourage a partial displacement model in the climate section and for it to be modeled on a 60-year social cost of carbon, again, given precedent in Minnesota. So that's a technical comment.

The less technical one is I had a wonderful conversation earlier today with one of the state employees here and we talked about public process, because this is really cool what we're doing here.

It's really cool that the State has said, "We will be open and we will listen and we will make a commitment to have 22 meetings and to hear voices."

I know that it's tough to sit up there or stand up there and essentially hear your work criticized, and I want to say that I think all the speakers share a belief that good process can lead to good outcomes and good science. So that's where this is coming from.

Now, the thing that came out of this conversation this morning, I want to say to everybody in the room, including all the state employees, is I think maybe in some people's minds it's a little bit of a lack of understanding of the importance of this particular decision.

Because what I heard was that,
hey, it feels great. We're in kind of a new
moment here with a lot of groups coming out and
participating. We're seeing a lot of young
people at many of these meetings.

We're seeing a lot of indigenous people really committing their time to this process. And what I heard this morning was that that would probably continue and it's really cool to see this kind of future we're heading into where people feel they have a voice in government this way.

But what I want to say is that that isn't automatic, and I am more sure of this than I am sure of virtually anything.

The outcome of the decision on this project is what is going to determine the way that the State interacts on environmental

issues with young people and indigenous people for the next 50 years.

If we go through this process with all this openness and positive discussion, good science and the project is built anyway, that will absolutely shut that off. That will shut that off.

You do not get to make that decision and then keep the collaboration going forward, because it will have been a slap in the face to the hundreds and hundreds of people who have come out, voiced their opinion, been heard or felt like they were heard in that way.

This is thus extending a hand in cooperation and goodwill times 22. You're in a lot of meetings. But it is not going to be there forever and it is especially not something that can be kept automatically, regardless of the decision made on this project.

It is dependent on an outcome that's based in the science and on a strong environmental impact statement being the end result here.

And I would encourage everybody

to just realize the gravity of the decision that's upon us and how it's going to impact the way that so many constituencies interact with the State of Minnesota for decades to come and how they feel. Thank you.

FACILITATOR: Are there others who would like to make a public comment to the group at this time? Again, there's also the written form and a court reporter out in the hallway at this time. Anybody else at this time?

Name and spelling for the record.

MS. NICOLETTE SLAGLE: Hi, I'm
Nicolette Slagle, N-I-C-O-L-E-T-T-E
S-L-A-G-L-E. And I just kind of wanted to
support a little bit of what Allen was saying,
and bring up this issue again of the
abandonment and the cost estimates that
Enbridge has in there.

For anybody in this room who hasn't read through the abandonment section, it's actually quite short, which is pretty disturbing, because we know that this is not their only line here.

And so if they do get to kind of just decommission it, abandon it, and leave it in place, their estimated costs for the removal of that pipeline is \$120 billion.

So if Enbridge is not required to pay that, who is going to pay that?

Because the tribes are not going to want those pipelines left on their land, and I'm sure there are some homeowners that aren't going to want the pipelines left on their land or the contamination left in their soil.

If Embridge is not required to pay for this, who is?

That's only their first pipeline.

Let's think about the fact that they want to

build this whole new corridor and put in a new

pipeline that they're estimating will have a

lifetime of 30 years.

I'm going to have to disagree with Andy and I think Thane also, but Thane's not here anyway. I don't think that we should think that they're going to use that pipeline for 60 years when they say they're going to use it for 30.

What that says to me is they know

they're not going to have oil to put through the pipeline for more than 30 years. And if they're saying 30 years, it's probably actually 20.

We know the oil industry is being divested from on a massive scale. Numerous international corporations have pulled out of the tar sands. The Saudi government is even looking to what is next after the oil industry.

So if we have these two major producers looking at the end of the oil industry, we have to think about are we going to allow this company to get their final last gasp out of the oil industry, or are we going to say no, and we want to keep our lakes and areas clean and want them to clean up the mess.

And we don't want them to leave us with six pipelines that somebody else is going to have to pay for.

I also want to talk a little bit about the integrity of Line 3 and just the integrity in general.

Back in March or April, I don't really remember what it was, but Enbridge had submitted a whole bunch of testimony on Line 3.

And one of it was the testimony about the integrity of Line 3. And it's pretty shocking how bad that pipeline is and that's for a number of reasons.

The manufacturing process that they use to make this pipeline is -- it's -- basically what they did is took a flat sheet of steel and rolled it, and then that seam, that longitudinal seam is prone to cracking. So there's a lot of those issues.

There's a lot of issues from the wrapping that they put around it, disbonding from the surface, which means the cathodic protection can't actually protect the pipeline.

And so they say that, "Oh, you know, we're going to maintain it forever." We already know they have to do so many integrity digs per year, like 600 or something.

And they're projecting that they're going to have to do that into the future.

So now, if they're stepping away from that and saying, "Well, we're going to maintain it," but they're not going to be going in there -- you know, if an area of the

pipeline does subside, are they going to go in there and fix that now? Or are they just going to maintain the cathodic protection that isn't even connected to the pipeline anymore?

Also, in that testimony about the integrity, there's this very interesting comment that states that, "Since 2003, Enbridge themselves have had an internal review committee about the need to replace this pipeline."

I think it was 2003, or maybe it was -- I think it was 2003 that the MPCA wrote a letter to PHMSA about this pipeline and all of the failures that they've had on it.

So they've known for that long that this pipeline needs to be replaced. But what they did is they waited and they drug their feet and decided to just commit to integrity digs until the cost of replacing the pipeline in place, building a whole new pipeline in the corridor were equal.

So they didn't want to do
anything until they could get a whole new
pipeline, because that's how they make profits
for their shareholders -- is making new

projects.

Which is why they're pushing so hard for this one. Because Al Monaco himself, the CEO of Enbridge, stated that Enbridge is going to be transitioning out of fossil fuels and that if all of the three major pipeline project proposals that are on the table right now get approved, there will be too much oil. There will be more pipeline capacity than oil coming out of the tar sand.

We know the tar sand production numbers are not going to increase. If you go to the Alberta provinces, big projects in Alberta website, and you look through there, all of these projects that the tar sand industry has been projecting that are going to come online, if you actually dig into those projects, most of them are idled or stalled, where people are divesting from those projects.

So why are we going to let

Enbridge come in here, put in a whole new

pipeline that then they're going to abandon in

30 years and then we're going to have the

existing corridor that they're abandoning, the

new corridor that they're abandoning, for a

project that's -- what did they say,

\$2.8 billion?

Well, do a \$120 billion project, and clean up their mess and shift out of the oil industry now, not in 30 years, and scrape every last dollar out of there you possibly can.

FACILITATOR: Thank you.

Anyone else who wants to make a public comment for the full group?

MS. LAURA COLON: Hi, I'm Laura Colon. That's L-A-U-R-A C-O-L-O-N.

I'm just a private citizen, but
I also am a member of (indiscernible), and I
didn't have as much information as I wanted
coming into this meeting, except for my
visceral reaction looking at the project and
the maps and the routes.

And knowing what I know from doing my own personal research about energy and that it seems pretty plain to me, touching what the last speaker spoke on, that the newest technology in energy is not fossil fuels, it's not oil.

We need to move on to other

things, because we know that's a finite resource.

Just my own general layperson reaction looking at this project, it doesn't make sense to put so much money into older technology. Why are we not putting money into the new renewable technology, especially for a country like America?

We want to be leaders. We need to lead with energy. We need to move away from fossil fuels. Thank you.

FACILITATOR: Anyone else who wants to make their comment for the group?

So again, there are written comment forms if you want to take some time to write afterwards.

The court reporter can take a verbal comment, if you want to give it individually. State folks will stick around and we can continue to have the conversation. If people want to submit written comments, we'll be here for a bit afterwards if people want to do that.

We have plenty of food so eat it on the way out.

		57
1	Comments are due on July 10th.	
2	So if you want to submit them, do them by July	
3	10th. The State will take those comments and	
4	be responding to them.	
5	We appreciate you all coming	
6	out. Thank you for your time and your	
7	comments and constructive and respectful	
8	conversation. And have a great weekend and	
9	safe travels home. Thank you all.
