FACILITATOR: All right, everyone, welcome. Thank you so for coming out tonight.

Thank you very much to the Mille Lacs
Band hosting us as well. We greatly appreciate it.

So if folks want to take a seat, there's chairs here, there's a few chairs around here. We've also got chairs around the outside if people want to sit. I would like to get us started with the public comment period.

So, first, what I'd like to do, as people settle, is introduce Jamie MacAlister, and she is with the State of Minnesota for the Department of Commerce and is the project manager for the Environmental Impact Statement. And, again, just want to stress this is a meeting hosted by the State of Minnesota, who's overseeing the Environmental Impact Statement.

I'll hand it over to Jamie to say a few words to get us started, I'll run through meeting procedures, and then we will hear from an elder and then begin public comments.

MS. JAMIE MACALISTER: Good evening, everyone. Welcome. I'm Jamie MacAlister with the Minnesota Department of Commerce, and we are pleased to have so many of you come this evening.

I just want to give you a brief introduction to what we're going to be doing here this evening, and then I will turn this back over to Pat. We know that you came here, in part, to provide us with your verbal comments. We want to make sure you have the time to do that.

First of all, we would just like to remind everyone that this meeting is a State of Minnesota meeting and that we are here primarily to hear your comments on the draft EIS. We want to make sure that it is clear that we are not here representing the Applicant in this case. We are here to gather your comments on the draft EIS and all the analyses that have gone into it.

We would also like to remind everyone that the Minnesota Public Utilities Commission will be making two decisions on this project. They will be making a decision on the certificate of need, and they will also be making a decision on whether or not to issue a route permit for this project.

And hopefully everyone has had an opportunity to visit the posters and to talk with the agency staff that we have here tonight. We have folks here from the Minnesota Public Utilities

Commission, the Department of Natural Resources, and

the Pollution Control Agency, as well as the Department of Commerce.

18

19

20

21

22

23

24

25

And just another reminder that the EIS is -- we are not making a decision here tonight, but that the EIS helps to inform the decision makers as they deliberate on this.

So we'll just quickly go through a little bit of the process and the timeline. The draft EIS was prepared based on the scoping document that was prepared last fall. We are now in the draft EIS comment period. And as you can see, there will be a final EIS issued towards the end of the summer, and that will initiate another process that is run separately from this process but helps inform. That will be the contested case hearing. Those will be run by the administrative law judge. And folks will have an opportunity to talk to the parties at those meetings and to provide their comments to the judge regarding their position on the project.

It is not expected that a permit or any decisions on this project will be made until sometime next year, in 2018.

So if you don't get your comments here in the upcoming public meetings, you will have

another opportunity to provide comments on this project during the contested case hearing in the fall.

so what we are here for this evening and asking you to do with us is to provide us with substantive comments on the draft EIS. We would like to know if there's information that is missing from the document, if the information that is there is unclear, and if there are things in the document that could be improved. That's what we're looking for from you as we go through these meetings.

State agency staff, as we said, are here to discuss some of those analyses with you, if you have questions. And you are welcome to submit comments to us verbally here this evening, in writing, or you're welcome to send them in by mail or email at your leisure.

Once the comment period closes on July 10th, we will be compiling all of the public comments and be posting them online. So you will have an opportunity to see your comments, as well as the comments of others from each of the meetings that we've held.

So let's talk about the comments here briefly. We want you to know that all the comments

are considered equally, whether they're offered to us verbally or in writing. And, again, a reminder that the EIS is not the decision-making document. It is what helps to inform the decision makers, as they deliberate on this and, furthermore, that your comments will help us prepare the final EIS.

I'm going to hand this back over to Pat, who will talk to you a little bit about our general meeting guidelines and open it up for your comments. Again, thank you for joining us this evening.

FACILITATOR: Thank you very much.

First, if we could just do a quick

round of applause for your cooks tonight. I think

they're still back there. We really appreciate it.

So thank you so much.

Okay. So I've got the folks who have signed up to speak. And after I've gone through these cards, I'll give a chance, if other folks who didn't sign up and want to and we have time, we'll go to that as well.

So how we'll run the meeting is this:

Generally with a crowd about this size, we give up
to five comments per commenter. So we will run a
little stopwatch. We'll show you in a second here

about how to do that. And we do ask people to stay on time so we get everybody's comments. But given the crowd size, we should be able to easily accommodate everybody within the five-minute limit. And you're certainly, of course, free to speak less than that.

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

When people are commenting, we want to make sure that everyone has a chance to voice their So we would ask that people here listen as opinion. the commenter comments. At the end, if you want to be affirmative, that's great. What we do ask is for people not to be negative about comments. there's probably a wide range of views in this room about the environmental impact statement, about the pipeline, about a range of issues. And what we want to do is recognize people are going to have different views and still be respectful. So iust ask that people be affirmative at the end of any comments.

And, again, please don't interrupt when people are speaking, of course.

It's important that people -- we ask that people actually direct their comments to the EIS, to issues, to organizations, to agencies, but not the individuals in the room. And that's

primarily so that everyone can feel comfortable and anyone can make a comment who wishes to make it, and we kind of keep it civil for everyone. So feel free to make comments about the issues, the organizations, but not the individuals in the room.

The role of the state agencies is to listen. State agency folks, do you want to raise your hands who are here tonight? Okay. So we've got a number of folks, as you know, around the poster boards. Their job tonight is to listen.

We have a terrific court reporter, who is going to capture every word that you say for the record. And the comments, as Jamie said, they will all be compiled, considered, and reflected upon as they move to the final EIS. And they'll also be compiled and posted on the State's website as well once they're all gathered up.

It's really important that the court reporter can hear you. So don't talk as fast as I do. If you hold the mic like this, that's actually the best way to actually hear in this meeting and she can hear. And if she can't, she'll let me know, and I'll give people a little bit of prompt as we do that.

Cell phones, if you put them on do not

disturb or silence or vibrate, just so we don't have your interesting ring in the middle of someone's comments, that would be much appreciated.

As you know, the bathrooms are right there, and there's an exit that way out in the hall, just for safety purposes, and out that way as well.

We are going to -- again, we'll go to the clock. What I'll do is when -- we have a little stopwatch that'll show up on the screen in just a second. When you speak, state your name, spell it for us so that the court reporter can hear that, and then we start the timer for up to five minutes.

We will bring the mic to you. So when I actually call out your name, just raise your hand, we'll bring you the mic. You can speak sitting or you can speak standing up. Totally up to you. But we want you to be comfortable; we'll bring the mic to you as we do this.

But before we start that, we do have an elder in the Band who would like to speak, Dale Green. So I'd really like to hand the mic over to him and honor him and appreciate that he's opening the comment period with his presence and comments.

MR. DALE GREEN: My name is Kaavaak.

K-A-A-V-A-A-K, and it means ruffles.

I wanted to speak to some of the listeners to voice my comment and my opinion. I'm 84 years old, and I have seen a lot of changes. What I see now, Corporate America is ruining our mother.

Our mother is our earth, is our life. She gives us everything. You must realize that. Everything that you have today comes from mother. You're digging in her flesh. You're leaving scars. You're releasing poisons. Everything that -- she has given you many warnings, you see the warnings, but nobody's paying attention.

Iron ore and oil, I'm sorry to say that, but that's what's running your war machines.

70 percent of your oil and iron ore goes through the -- to make the war machines run and build. It seems like corporations have lost all respect for life.

I'm just wondering right now, you've got a bounty on the wolf, who's next? A human being?

There's a lot more I could say, but I think I've said enough now. I just want to remind you think of mother earth, life. We are earth. We are mother earth.

1 That's it. Thank you. **FACILITATOR:** 2 Thank you. 3 Okay. We're going to pull up the timer and get folks ready for the comments. 4 5 Okay. So, again, just a reminder, we'll bring you the mic. State your name, spell it 6 7 for the court reporter. Hold it kind of like this, 8 pretty close, so that we can hear you. 9 And, Scott Kramer, you are up first after our elder. Scott? And we'll -- Leslie will 10 11 bring you the mic right there. 12 Is just name and spelling for the 13 court reporter. I'll have to MR. SCOTT CRAMER: 14 15 remember there's people behind me and in front of me and everywhere. 16 Scott Cramer, C-R-A-M-E-R. I first started coming up here 27 years ago. 17 I had 18 hair then, it was brown, and it went away. lot of things are going away in life. 19 I've spent most of my life between the 20 cities and coming up here. 21 The last seven years 22 we've had a major garden. So I didn't come as a 23 farmer today; I came looking like pretending I had a 24 lake property instead of a garden. And the garden

25

depends on water.

And in Aitkin County we may think mosquitos are our most precious natural resource, but they're not. There's one other. It's water. This county is blessed with an abundance of water. And one thing we've learned through all the years of working in renewable energy is that there is no alternative to water.

And I have solar panels, and I work renewable energy fairs, and I've been involved with energy issues for most of my life. But the water is what it's all about. We and the planet are about 70 percent water.

North Dakota last year heard they were going to have a pipeline put just across the Missouri River on top of them, above them, they said no, no, we don't want it. So DAPL, the Dakota Access Pipeline, said no problem, we'll put it where nobody cares; we'll put it on top of the Standing Rock Reservation. If you follow that issue at all, you'll know what happened at Standing Rock last year, because people as usual, in deciding where to put something, where will it be the cheapest to do it. And it would be right on top of that reservation.

So now we have a pipeline proposed

here, which we stopped one here. Remember that?

Two years ago, the Sandpiper, we stopped it. And it was stopped because it had a worthless Environmental Impact Statement. And they've done a much better job on this one, but the fact is it's still a problem in what this -- all these beautiful surveys here don't talk about is the reality of the future.

Renewable energy is here now. Coal jobs are not coming back, not because somebody hates coal; it's because it's cheaper to do wind, and it's getting cheaper to do solar. And we'll be living in a renewable world sooner than you think. It's happening all over the country and the planet already.

So if we put this money into a pipeline for a resource that, in fact, we're killing ourselves by using too much of it and heating up the planet, we leave ourselves no opportunity to use that money where it should be, on renewables.

This -- you see it right in our newsletter from Lake Country Power last month where they're very happy where they don't have to shut any coal plants down. They call it stranded costs.

So this pipeline, which nobody needs right now, really, and the other ones, the DAPL one

that's going through that really has no oil to go in it right now, because the prices are so low because there's so much oil on the market right now, is a great crossroad. This is an opportunity to say put the money into technologies of the future, not of technology of the past.

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

This planet developed coal, gas, and oil over hundreds of millions of years. 200 years, the industrial revolution till now, we've managed to burn up about 25 or 30 percent of it. More of the oil. Less of the coal. But we can't keep doing this, and that's the problem. And there are alternatives. 30 years ago there weren't. The solar industry, the wind industry, they were minuscule. They're not anymore. They're huge. There's more jobs being created in those fields than any other area of energy developed. That is the present, and that is the future.

So if you study the past to understand where we are today, to understand where we will be tomorrow, you don't have to do like the Iroquois Confederacy, look seven generation forward for your inactions. I ask you look two generations. Look at your grandchildren. They have names. They have faces. You know who they are. What world will they

live in when they reach our point as elders? What will be left for them if we don't change what we're doing now?

Thank you.

FACILITATOR: And just a reminder, at about 4:45 I will stand up, and that will be a signal to the speaker that you're at about your five minutes.

John Munter. John. Leslie will bring the mic to you. And name and spelling of name for the record. Thank you.

MR. JOHN MUNTER: My name is John Munter, M-U-N-T-E-R. Department of Com-- I'm from Warba, by the way. I'm a retired guy.

The Department of Commerce has been given an impossible job here. I don't think the DEIS can be fixed. There are four criteria for the PUC to judge adequacy. The Department of Commerce has just now gotten agreement from the Public Utilities Commission to hire an economist. means that the economic data will be coming someday in the future, after all your public hearings are And so if you want to get the full story, you done. have to go online and go to these other hearings, and then comment on that. I'm not sure that's been

clear to people.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

So that's a problem for the MEPA process where route, rote, and need here should be combined in this public engagement process. is, the Department of Commerce relies on the Energy Information Administration, the EIA, of the United States, which has been very wrong by factors of seven and ten on projections of renewable energy, Jeff St. John at Greentech Media says, for four One, the EIS doesn't track falling cost of renewables; two, they underestimate the performance of current facilities, renewable facilities' improvements; and, third, there are future low costs of renewables; and, fourth, the rise of solar is missed as well. Consequently, the EIA projects world oil demand rising 5 percent through roughly This conflicts with present reality, 2040. unfortunately. All major oil companies are fleeing Canada with Saudi oil and Permian oil flooding the The big boom in the Permian is why we still have a glut of oil, and it's going to go on for a while.

This is why many economists and astute observers are saying that we're going to be hitting peak oil demand very soon. Carbon tracker says in

2020. Michael Liebreich at Bloomberg Energy Finance says between the 2023 and 2028. Michael Seeley of Deutsche Bank, 2024. Simon Henry, who was a shell chief financial officer, actually, 2022 to 2032. The World Energy Council, 2030. The ratings agency Fitch suggests pumping electric vehicle batteries could be the death spiral for the oil industry, actually.

alternative is problematic, because it doesn't consider the Saudi and Permian oils as alternatives. Instead, it talks about trucks and trains coming from Canada. And if that was reasonable, we would have seen that happen after the KXL was defeated, and that didn't happen. I mean, why not have wagon trains and horseback and mule trains coming down with oil, I mean, the U.S. carbon emissions and you have to subtract the burps and that type of thing.

But -- so this is why the second criteria is problematic. You're not dealing with reality here, but options that are really not going to happen with trucks and trains.

Thirdly, there's no discussion of consequences to society are more favorable to granting the certificate of need than denying it.

We've heard a lot about all of the dreadful consequences about what is the benefit. Is there going to be a drop in gasoline prices? Is there any benefit, actually, to putting this project through, really? I don't see that discussion in the DEIS.

1

25

Fourthly, would the proposed facility comply with relevant policies, rules or regulations of other federal, state, or local agencies? And I don't believe that it complies with Minnesota There's the Alberta First greenhouse gas goals. Nation genocide issue of the First Nations north downstream from the tar sands. There's the environmental justice issues around Detroit refinery and the Port Arthur refinery, and little bit connected action of the Bad River Band in Wisconsin of Line Number 5. It doesn't have a lease since I consider that an environmental justice 2013. issue as well.

So I'll quit there. Thank you.

FACILITATOR: I have Sandra Skinaway.

Sandra, you want to just raise your hand? Thank

you. Sandra. Just name and spelling for the court
reporter.

MS. SANDRA SKINAWAY: Boozhoo. Hello, everybody. My name is Sandra Skinaway. I'm here

from the Sandy Lake Ojibwe Tribe, located just north of McGregor here on Big Sandy Lake; and I'm here to submit a few comments, just verbal comments. But I have yet to fully read the DEIS. And so far I'm looking at bits and pieces of it.

But I have provided testimony many times before at these public hearings, you know, for the Sandpiper. So, you know, it's basically the same thing. It's only 25 feet from -- Line 3 is 25 feet from the Sandpiper. That was gone. It's gone now, which was good. But now we have to deal with Line 3.

and all my other public comments are basically the same. But I just want to add something here. And it's been kind of bothering me a lot more, because it's becoming more apparent with the climate change that we need to -- everyone needs to focus on our future. We all know it; but pipelines, they all leak. They eventually will leak sooner or later. But we need to start thinking about our future and protecting it for those yet to come.

Now, I understand that in the future that we're probably going to most likely have like famine, food shortages. Overpopulation is really a

serious issue. And I'm worried about the future for those yet to come. And I think we all need to start thinking about that and working now to try to protect what we have.

And this pipeline coming through our water-rich area here with wild rice, I mean, this is our life-giving food. This is the reason why we're here. And so I think we need to protect that.

And I really would suggest you get a different alternate route away from our water-rich areas and lakes, you know, where fish are, the wildlife, the waterfowl, birds. I mean, we need to start protecting them as well.

Instead of doing a shortsighted future on monetary gain for companies, we've got to start thinking about the future and our children's and their children's future. We're looking at the seven generations ahead. I'm not looking at just two. So I think we all need to start doing that now.

Miigwech.

FACILITATOR: Thank you, Sandra.

We have Richard Draper next. Richard, want to raise your hand? Great. And we'll just bring you the mic. Eric is going to bring you the mike.

Richard. And just name and spelling for the record. Thank you.

MR. RICHARD DRAPER: Draper,
D-R-A-P-E-R. Between the 1820s and the 1850s there
existed an Ojibwe village on the northeast side of
Esquagamah Lake in Aitkin County. It was one
portage away from Moulton Lake, which is the
headwaters of Mud Brook.

Mud Brook runs down through Bass Lake,
Lows Lake, and what's left of Birchdale Lake, after
the DNR all but destroyed it. I talked to the
wildlife biologist responsible for that debacle.
Mud Brook runs to the Little Pine River, which it
joins, and then on to the Big Pine River and
southwest to the Mississippi. These streams and
rivers were the highways and back roads the Ojibwe
used.

Esquagamah means end of the trail in Ojibwe. About three-quarters of a mile as the crow flies northeast of the Esquagamah Wakiagun or village is a high ridge of sugar maples, now bisected by Aitkin County Road Number 1 where the village Sugar Camp was, directly east of White Elk Lake.

One mile as the crow flies further to

the northeast lies Moose Lake, a first-class state wild rise bed. This is where the Esquagamah Village gathered in their Manoomin, their good berry, their source of bread carbohydrate prior even to fry bread.

I knew a man, now deceased, from

Swatara who liked to wander the woods as a young lad
who told me of seeing six or more birch bark canoes
stored on the southwest side of Moose Lake that
appeared to him to be very old and in poor repair.

Moose Lake is listed on a large
Minnesota map showing significant native activity
centers. This map is found in the basement map room
in the Wilson Library on the University of Minnesota
campus.

Moose Lake is a first-class wild rice bed because the rice produced there is consistently a grade A quality wild rice. As an example, Blind Lake in Aitkin County would rate a D or D minus, as they produce mostly chaff. Although Moose Lake is not a large bed, it is an early-ripening gem of the a lake when it comes to quality and percentage of beautiful ripe rice.

We declare small libraries, even in Aitkin, historical preservation sites. We declare

wooden houses heritage sites, because some famous person lived in them, and yet we propose to put a pipeline, which is guaranteed to leak -- let me say that again, guaranteed to leak -- near an Ojibwe heritage site that will someday be spoiled beyond recovery. Wild rice is also an indicator of water purity, and there is no going backwards.

The Dakota Access Pipeline has already leaked over a hundred gallons, according to the Minneapolis Tribune newspaper. The article went on to say that, quote, from 2006 to 2016 there were 3,032 significant pipeline spills reported, at the cost of \$4.7 billion. In December 2016 a pipeline leaked 176,000 gallons of crude oil into a creek in western North Dakota, only 150 miles from the Dakota Access Pipeline, end quote.

Cost cannot just be measured in dollars. To abandon a pipeline and carve a new route is arrogance, coupled with greed on a level that makes all the parties complicit to the outcome. If money talks, then big arrogant money curses as it swaggers on.

A Cree prophecy from the 1800s said this, quote: When all the trees have been cut down, when all the animals have been hunted down, when all

the waters we can no longer drink from, when all the air is too sick to breath, only then will you discover, white men, you cannot eat money, end quote.

I will not come out to protest your pipeline, although I understand why people do.

There is much vanity mixed in there. But I promise I will pray against you, for I fear the God of heaven, the creator of all the earth, and everything in it. I will ask God to judge all those who take part in this evil plan. In the back -- in the book of Proverbs, Chapter 1, Verse 19, and Chapter 15, Verse 27, it says, quote, So are the ways of everyone who is greedy for gain, it troubles their own house and takes away the life of its owners, end quote. This is the word of God.

It will be easier to choose carefully, to make reasoned choices based on your true hearts rather than succumb to pressure and influence and go to the grave regretting destroying this food-producing Ojibwe heritage site forever.

FACILITATOR: Thank you, Richard.

And for Richard and anyone else, it would help if the court reporter actually has your written statement, if you have one and you have an

extra copy, you can just hand that to the court reporter. For anybody who does that, that's super helpful to have. You don't have to, but we would appreciate it if you can. You can put it right up on the table.

Next I have John Cyrus. John.

MR. JOHN CYRUS: Here.

FACILITATOR: Okay. We'll bring you the mic. And, John, just -- Eric is going to bring it to you. Right behind you.

And name and spell it for the record.

My name is John

Cyrus, C-Y-R-U-S. I'm the mayor of City of

Tamarack. And being the mayor of the City of

Tamarack, we are in favor of the new corridor for

MR. JOHN CYRUS:

Pipeline 3. The reason, in the Environmental Impact Study, if we do not have a new Pipeline 3, they

possibly could use the rail line to transport that

amount of oil. Now, the oil as of now goes down the

21 rail, goes through St. Cloud. But this would cause

ten trains, possibly -- I think in the environmental

study it states something like ten trains could be

coming through the City of Tamarack, and that would

be a lot more impact on the environment than the

1	pipeline would be. There's more accidents with rail
2	than there is with a pipeline.
3	And that will end my I'm very short
4	here, but that's all I've got to say. Thank you.
5	FACILITATOR: Thank you, John.
6	I have Keenan next?
7	MR. KEENAN GONZALES: Hold on. Hold
8	on, please.
9	FACILITATOR: Okay. Keenan, I can
10	also put you in the next line, if you want to. You
11	bet. We'll come back. No worries.
12	Next will be Janet Hill. Janet?
13	Okay. And we'll have Leslie bring you the mic.
14	Name and spelling for the record.
15	And, Keenan, we'll get to you when
16	you're ready. Let us know.
17	MS. JANET HILL: It's Janet Hill.
18	J-A-N-E-T. H-I-L-L. I'd like to cover some
19	specific parts of the draft EIS.
20	Page 2-38 discusses the merits of the
21	SCADA system, a computer system that will monitor
22	Line 3 to detect leaks. There are lots of
23	assurances about this computer system in the EIS,
24	but nothing about what happens when it's compromised
25	or hacked.

A quick Google search brings up all kinds of information on how attacks on the SCADA systems are on the rise, and there should be a section in the EIS on what measures are in place to deal with hacking.

On page 2-41 are assurances that Enbridge inspects and monitors its pipelines. And that's really great; but, again, we need to know what they do to fix those problems when they find them.

Just two weeks ago it was reported that Enbridge had been in noncompliance with Michigan law for years for insufficient supports along their Line 5 pipeline running under the Mackinac Straits of the Great Lakes. In northwest Minnesota on the Tamarack River, erosion has exposed a 100-foot section of pipe, leaving it vulnerable to whatever comes floating down the river. To fix the problem, Enbridge simply added legs to the pipe to stabilize it. This kind of duct tape solution is a real problem.

In twenty -- a 2013 study by the
Pipeline and Hazardous Materials Safety
Administration found that depletion of cover, which
is what happened at the Tamarack River, was a factor

in 16 significant pipeline spills at river crossings in the past 25 years. The two examples I just gave underscore why Enbridge's assurances mean little. Given their history, they need to do more work to assure us that they'll fix problems properly, before we should entrust them with our lakes and rivers.

The EIS also requires more information on the effects of peat acidity on pipes. In Aitkin County much of the pipeline would lie in peat bogs -- apparently forever -- and this could be a big problem for this area. The pipeline lies in the watershed of the Big Sandy Lake, a ten-mile square of lake that's the backbone of our local economy.

Enbridge claims that the oil from Line 3 will benefit of U.S. But as long as any part of this oil is being used to shore up the U.S. oil reserves, which in turn enables companies to sell surplus oil to foreign markets for a profit, then Enbridge's claim is untrue, and their main reason for needing this Line 3 is false.

Then I have one last comment. Today half of Norway's auto sales are electric cars.

India has a goal to have all electric cars by 2030.

And that's the direction we're headed in the United States.

One of Minnesota's electric utilities,

Xcel, already has the technology to borrow

electricity from cars being charged on the grid.

That's the state of green energy technology right

now, one of the fastest-growing job sectors in the

country.

Enbridge's temporary Line 3 jobs pale in comparison to the good-paying, permanent jobs we can create if we focus on infrastructure of renewable -- of renewable clean energy. If we allow Pipeline 3 to be built through Minnesota, we'll be stuck with a permanent aging pipeline running through the best parts of our state and slowly leaking oil into our water for years to come. The EIS needs to include the option to close Line 3 and not rebuild it.

Thank you.

FACILITATOR: Thank you, Janet. And if you have written comments, you can give to the court reporter. That would be great.

Keenan, are you ready? Okay. All right. And Leslie will bring you the mic. Just name and spelling for the court reporter.

MR. KEENAN GONZALES: (Speaking Ojibwe.) How are you doing today? And my name

Keenan Gonzales. That's K-E-E-N-A-N,
G-O-N-Z-A-L-E-S. And his Anishinabe name is
Biidaaban, B-I-I-D-A-A-B-A-N. That means the coming
of the dawn.

I'd like to talk about where oil kind of came from and how they said -- how in school they said that it came from the dinosaurs, and they said it was like all the nutrients and the biomass. Now. the biomass is interesting because, you know, we all got biomass, you know, whatever number. But trees have more biomass. You know, obviously the trees are bigger. And then you know like how all the scientists and the teachers said that the plants were way bigger, bigger than the dinosaurs. know dinosaurs are pretty big in their own right But plants are way bigger, you know, beyond comprehension, you know, mega force, super force. And so with the superior biomass, that's what created those big huge oil reserves.

Now, what do plants need? Sunlight, check. Water, check. Now, without water there would be no plants; and without the plants, there would be no oxygen for us to breathe and stuff. And without those plants, there would be no oil. Now, without that oil, though, we wouldn't have the car-

we wouldn't have to worry about global warming.

And then another thing we also got to take into consideration is, after the meteor hit from Pangea or whatever how that goes, all the continents went spreading around, you know, in all different directions. So right now our continent is moving. You know, you can prove this geographically and, you know, all kinds of other studies.

And what about this pipeline? You know, this pipeline is built to stay there, stay where it is and, you know, it's going to get damaged just by the continental drift.

And, you know, where are we? You know, like everyone says -- and my grandfather, you know, rest in peace, always said, you know, this is a wetland, you know. And some of you might not know, but this is a swamp. You know, you just go walking out there, and they'll say you hit marshes, swamps.

You know, now, this in particular -blah. This area in particular was floodplain, you
know, by the local Minnezeebee (phonetic) Band of
Ojibwe. As my auntie said earlier, we lived over
there by the refuge, you know. So not only that,
you know, so we were river people. We had bitch

bark canoes and pretty much that thing would be light. For example, this woman could pick it up and be like, hey, this is light, you know, which it was, and it could go through the water with ease and stuff, you know. If that was our highway, then that means water is life -- more life for us, especially, and especially if you're in the desert and whatnot.

But, you know, this is stuff we all kind of really got to consider and think about, not let it go over our heads and, you know, let old squabbles reopen our wounds and whatnot and -- you know, because climate change, you know, it's going to affect us in a way. You know, I can't tell, but, you know, from -- years later, you know, after looking back at history, you can tell. You can see it. You don't know what's going to happen. You can just tell, you know.

But, you know, this is my 2 cents on the issue. And thank you for listening.

FACILITATOR: We have Jean Prickett, if I said that right, next. Jean.

Great. We'll bring you the mic. And just name and spelling for the record. Thank you.

MS. JEAN PRICKETT: Yeah, Jean Prickett. J-E-A-N. P-R-I-C-K-E-T-T.

First of all, I second Mr. Cramer's remarks and also Janet's remarks about the oil pipeline is obsolete technology. First of all, all of the profits go to Canada. We would get a few jobs here in the state, in Minnesota, but they would be short lived.

In general, pipelines are safer than rail hauling of oil, but pipelines leak. And for that reason -- if for some reason the Minnesota agencies decide that we should go through -- should have this pipeline, it should not go through northern Aitkin County or Cass or Crow Wing where we have all of the -- not only the wild rice, but just water. Clean water is going to be more precious than oil sometime during this century for many people.

And Enbridge has been talking a lot of -- talked a lot about how safe their new lines are, they're wonderfully put together, and they have this wonderful little thing pig that goes through the lines and takes pictures. But just in the last two years there have been two major spills that I've read about. And I don't do a lot of research. I just -- these showed up in the Brainerd newspaper. Two major spills in the Dakotas. They were both

small leaks, but they eventually put out several thousand gallons of oil. Enbridge did not know it was happening. It did not affect the line pressure, so they didn't know this was happening. Eventually the oil came to the surface. It was found by the local landowner, the farmer. And these were both new lines with all of the bells and whistles that they claim.

No one in Aitkin County routinely goes out and checks the condition of the local bogs and swamps and wetlands. That's open land; and if a small spill happens that doesn't show up on their radar, it's going to just keep leaking and leaking, until all of the sudden one of us in this room will see an oil sheen on the creek going by our house.

And I highly recommend to all of you who are opposed to this pipeline a very well-written, well researched article in a magazine called The Bent. This is a quarterly magazine of the Engineering Honor Society Tau Beta Pi. The author of the article is Trudi Bell. And it's all the about pipelines, and it's in the winter issue 2015 -- yeah, winter issue of 2015 by Trudi Bell, all about pipelines.

And I strongly recommend that this

pipeline, if it's built, should go somewhere down the western part of the state where the land is dry and solid and someone gets out there to keep track of it.

FACILITATOR: If you do want to provide your written comment to the court reporter, that would be most helpful, if you can.

Next I have Kaavaak or, I think, Dale?

Okay. We'll bring you mic. Eric, you want to bring
the -- is it -- do I have that right, Kaavaak?

Right here? No. All right. Do we have -- I think
it's either Dale -- all right. We'll come back to
that. All right.

All right. Next I have Lynn Derby?
Lynn.

THE WITNESS: Over here.

FACILITATOR: Great. Great. We'll bring you the mic.

Just name and spelling for the record. Thanks, Lynn.

MS. LYNN DERBY: Hi, I'm Lynn. I don't usually speak in groups. As a matter of fact, I'm loving hiding in the woods, because I've lived in the city too long. So usually when I get in front of a group like this what I want to say

disappears, so it will probably sound like a story and a little abstract.

So I grew up in southern Minnesota.

My favorite memory was grandmothers and their sisters walking in the woods. It changed my life.

I'm turning 60 in just a couple of weeks. Both of my grandmothers died at 60. And so I'm really living my dreams. I love water. I think what saved me as a little girl was standing and filling my pool up with water.

I live up by Savannah. I've spent the last 40 years trying to figure out what's happened to the native community by Isanti. If you all don't know that story, you should research it.

I didn't research what I want to say.

I'm grateful to those who did. What I want to say
has changed my life. I was teaching art in north
Minneapolis with 650 kids a week. I tell people I
almost died. Some people wonder how could you teach
650 kids a week. Well, 25 classes 25 times a week.

It was tiring.

What changed my life was a group of us -- and, truthfully, I don't know how it happened. But Katrina happened. And we said, we're Minnesotans, we've got water. So we took a big

26-foot truck. It was beautiful. It was magic. It was a \$38,000 McKnight Foundation Grant art project that was called The Famine Project. So we took water and 38 loads of food to rural Mississippi and Louisiana.

23

24

25

I'm just going to shift for a minute.

My closest friend since then is a -- actually, she's
a 300-pound African American woman in New Orleans.

I call her the Dalai Lama of the black community,
because she's taught me to slow down and I've taught
her to move.

What I want to say about this pipeline is I don't believe we need it. And I say this because the craziest thing I did during Katrina was when others went home, and I thought, hum, I wonder what's out on Grand Isle. So I took a load of food and water, and the Jewish Community was filling this 26-foot truck to Grand Isle. I met the sheriff He's from Superior, Wisconsin and ended up there. in Grand Isle, because he married a Cajun woman when he was in the Coast Guard. And if you've ever been to Grand Isle, it destroys the Florida Keys. this friend of mine Thomas' son runs the oil, the Fuchs (phonetic) and the oil rigs, and he's worked in every part of it.

1	And if you've ever been to
2	Mississippi, Louisiana, and over to Texas where it
3	says don't get out of the car here, the lands are
4	destroyed. And I actually just kept going back to
5	Mississippi and Louisiana, because the people are so
6	alive there. They get mad, and they live in
7	destroyed lands.
8	Probably almost my time, so I better
9	say what I want to say, which is I don't believe we
10	need this oil. I know there's huge storages of oil
11	in places like Mississippi and Louisiana for years
12	and years. And I just think our water is too
13	precious here, and we need to have the conversations
14	to figure out the alternative, and we need to listen
15	to our indigenous communities.
16	And I'm so grateful to have this
17	reason to come to East Lake. Thank you.
18	FACILITATOR: Thank you.
19	John Cirilli, if I pronounced the name
20	right. John?
21	UNIDENTIFIED SPEAKER: Can you come
22	back to him?
23	FACILITATOR: Yeah, I sure can.
24	Robert Peterson? Robert?
25	Great. Eric will bring you the mic

Over here.

right there. And just name and spelling for the record. Thank you.

MR. BOB PETERSON: Bob Peterson. Bob with an O. Peterson like the other half of the Petersons in the state.

Are there any employees or representatives of Enbridge here? Any subcontractors? Nobody? My question is for them.

UNIDENTIFIED SPEAKER:

Over there.

FACILITATOR: For the record -- sir, for the record, if you could just address the comment or issue or question, no problem. We ask you to address organizations, not individuals. So go ahead.

MR. BOB PETERSON: Okay. My concern is personal. My home and my property are immediately adjacent to one of the alternative routes where the pipeline might go underneath the Mississippi River. And if that happens, I promise you that I don't look forward to the process whatsoever, not the construction process, not the protest that will inevitably happen. It will be a major description.

I moved here from the cities 15 years

ago for peace and quiet. I didn't sign up for what's liable to happen. Even though this is my personal concern, I'm sure I speak for other property owners in the area who might be affected.

17

18

19

20

21

22

23

24

There will surely be aboveground visible infrastructure related to the pipeline, and my concern on a personal level is that it will have a major impact on my property value. It's tough to sell property in Aitkin County as it is. The county's been losing population for 15 years. Ιf that pipeline happens, I don't know who would want to ever buy that property.

That's my concern. I thank you for listening.

Regarding the Environmental Impact Statement, I can't really -- I looked at a number of publications. I'm very impressed with the process. I'm glad we live in a Democracy where we have meetings like this. And I hope everybody's voice is taken into consideration.

Thank you.

FACILITATOR: Thank you, Robert.

I have Jim Butcher next. All right.

Jim. Right up here. Okay.

And, Leslie, Jim's right here.

25

Bring you the mic, and just name and spelling for the record.

MR. JIM BUTCHER: Jim Butcher. J-I-M. B-U-T-C-H-E-R. I apologize for the accent. Retired mechanical engineer. I worked in the power generation industry, so I understand energy can be a complex topic.

I guess I'll just sort of lay my cards on the table. I think, unfortunately, we do need petroleum products. They go into so many things we take for granted. However, I think tar sands are a very, very destructive way to go. I don't think that's the way to produce petroleum products. In my opinion, we'd be better off using natural gas using processing to help propose at least coal-fired power products.

Having said that, this certificate of need, is it really to Minnesota's benefit? We're basically shipping stuff. We're just a conduit mainly, aren't we? It comes from Canada. A lady said earlier, that's where most of the profits are going to go. And then we ship it to Superior, which I believe is in Wisconsin. And so what's Minnesota get out of this?

And if Line 3 is built, what is the

payback period. I mean, North American oil consumption is dropping. You know, we have a (indiscernible) for 80 miles. We've now got a Chevy Volt at 238 on a good day. And my personal belief is we're making progress. We get 400 miles range on an electric vehicle. We're going to reach a tipping point on our need for petroleum. Liquid fuels will drop dramatically.

And we've all heard about Murphy's

And we've all heard about Murphy's law: What can go wrong will go wrong eventually. We don't design airplanes to fall out of the sky.

Occasionally they do. Pipelines will leak. We know they'll leak.

And one of my questions would be is there sufficient funds, contingency funds, to basically repair all the environmental damage when they do leak? And are there also punitive damages? If there aren't, why aren't there?

I've read recently that 22 percent of pipeline leaks are reported by the general public, so much for sensor technology.

That's basically, I guess, all the comments I have to make.

Thank you.

FACILITATOR: Thank you.

1	Next I have Terrance Roy, Jr.
2	Terrance.
3	We'll bring you the name right there.
4	And just name and spelling for the record.
5	MR. TERRANCE ROY: Good evening.
6	Terrance. Last name Roy, R-O-Y.
7	And my comment tonight is, you know, I
8	worked in the steel industry, I was a union iron
9	worker for 34 years. And abandoning that pipe is
10	not the option. Steel isn't made from just pure
11	taconite. It's made from crushed up cars,
12	refrigerators. Whatever they can combine with
13	taconite to come up with a certain grade, that's the
14	steel.
15	So in my concern, I think that's why
16	it's failing. They're using inadequate steel. And
17	I don't understand how them welds can be failing and
18	these pipes are leaking, but it must be human error.
19	We need to take them pipelines back
20	out. They put one in; they take it out. And that's
21	my comment.
22	FACILITATOR: And then I have Harry
23	Hutchins. Is there a Harry Hutchins who wants to
24	comment?
25	Let's see. Gordon Prickett, if I said

that right. Gordon? Great. We'll bring you the mic.

And just name and spelling for the record. Thank you.

MR. GORDON PRICKETT: Gordon Prickett.
P-R-I-C-K-E-T-T.

And I'll start my comment saying, if we put it in, we take it out. I believe we should remove the worn out 65-year-old Line 3 pipeline and put in a replacement for the Line 3 that is there in the same trench. Do not leave a damaged pipeline in place. Take it out and replace just the Line 3 going through, from Alberta to Clearbrook to Superior along Line 3 in the same trench.

As for the certificate of need, in today's energy economy there is no need for additional pipelines to carry tar sands crude oil from Alberta or fracked Bakken crude oil from North Dakota along the former Sandpiper route across central Aitkin County from Clearbrook terminal to Superior terminal in Wisconsin. There is no need for this oil, as we've heard how the energy economy is moving away from fossil fuel.

FACILITATOR: Thank you, sir.

And, again, if you have written

comments and want to give them to the court reporter, that will be helpful.

Harvey Goodsky, Jr. Harvey? Oh, there you are. Great.

We'll bring you the mic. And name and spelling for the record.

MR. HARVEY GOODSKY, JR.: (Speaking Ojibwe.) My name is Harvey Goodsky. H-A-R-V-E-Y.

And my personal opinion is environmentally we do not need a pipeline going through our pristine lake -- our water areas. Environmentally we do not need a Canadian company telling us we need something. Environmentally this is our homeland, so you should be listening more to us.

This is like the fourth or fifth time that we've been here doing this. And when is it going to be enough for you to understand that that's not what we want here? I am only a tribal member. I am no chief. I have no more say than what I am saying right now. And what I am saying right now is that there is no need for that in this area. We need more ricers. We need more -- we need more lake area. But oil is not what we need here. Plain and

simple.

I hope that, you know, this big

Canadian oil company will stop targeting our rice

beds and start going to places where they do need

pipelines. Maybe in Canada. Maybe Canada needs

more pipelines, but Minnesota does not need anymore

pipelines. Minisinaakwaang does not need a single

pipeline going through it.

That's all I have to say. (Speaking Ojibwe.) Miigwech.

FACILITATOR: I have Veronica Skinaway next. Veronica.

Name and spelling for the record.

Thank you.

MS. VERONICA SKINAWAY: Okay.

Veronica Skinaway. V-E-R-O-N-I-C-A. Last name

Skinaway, S-K-I-N-A-W-A-Y. Boozhoo. My name is

(speaking Ojibwe). That's for Thunderbird Woman.

And I'd like to start out by saying that my family has been in the Sandy Lake area since the 1730s, since the great migration for the food that grows on water, Mahnomen wild rice. And, you know, throughout the times, the French, the British, and the Americans have all come here; and we all grew to love the -- and of course, you know, the

British -- or the French, the British, and the Americans, when they came here, we shared our love for our wild rice; and soon we connected. And, you know, the -- our guests here had learned to love the Mahnomen as well. You know, as you can see, everyone stayed here. You know that they loved it too.

But, yeah, we traded, we connected, and we all learned to coexist here together. And, you know, it's a real extraordinary thing, given, you know, we are survivors from an indigenous holocaust. That's unspoken within the United States, within the education system.

And I just want to say that I've been a harvester of wild rice for the last four years; and it's a very natural way of life, to coexist with the wildlife, because the water is alive itself.

And it's not just life; the water is alive. Okay?

So when something is living, you know, and living itself, you know, we need to care for it, our living beings, our spirits. Water is our greatest spirit here, the greatest most powerful spirit here on this earth; and we have to protect it, take care of it, because we all wouldn't -- we all wouldn't exist without it.

I also want to say that I, you know, providing -- I provide for many communities with my rice that stretch from, you know, across the Upper Midwest, from the Red Lake -- stretching from the Red Lake Reservation, Fond Du Lac Reservation, Mille Lacs, Sandy Lake, East Lake. I provide for many communities. You know, it's -- Mahnomen is probably the most healthiest food on this earth. I'd like to say, you know, it's a -- it's not a grain; it's a water seed.

And, you know, one -- I experience -you know, last -- in the last four seasons -- you
know, it takes me awhile to adapt out there when I'm
on the water and I'm harvesting that Mahnomen wild
rice. So as I'm out there, you know, there are many
things that we have to coexist with out there, you
know, such insects, you know, there are various
insects that come out. One of them being rice
worms. You know, early season there are white rice
worms.

And so as -- you know, it takes me awhile to adapt to my surroundings. Right? I'm skittish a little bit, a little squirmy, keep hearing splashes around the canoe. Right? Like what is that; oh, my goodness. I keep knocking --

even though I'm scared, I don't know what's behind me, but I'm hearing splashing. And here my ricing partner, my boyfriend, he observes me; he says, you know what, the fish are following our canoe like it's a meal ticket because of the word rice worm.

1

2

3

4

5

6

7

8

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

But here -- and then we have like other bigger splashes around us. Right? So there was a -- there was a muskrat. There was the beaver. I've seen the fish. And then there were the eagles, you know, surrounding us? So it's -- You know, it's really ecological here, you know, and how we all coexist.

And that's why I -- you know, I want to conclude with my -- with my speech, you know, by saying I am against it. And my family has been here You know, we're for, I want to say, over 300 years. still not going anywhere. I'm a nonremovable Sandy Lake Band member. I'm here to protect -- this is my daughter, Jasmine. She's going to be 14. She's a harvester already, you know. And I want to be able to -- and I -- and I'm going to be here to ensure that my grandchildren are going to be able to They're going to be able to love that wild provide. You know, that's my dream, and that was my rice. ancestors' dream.

So that's why I'm saying, no, you can't have any pipelines here, because this water is too great; our lives are too important. We don't need marble courthouses in Aitkin County. Right? We're just fine with how we are right now. You know, we make do with -- we make do with what we have, and we don't need the pipeline.

Thank you.

FACILITATOR: Thank you very much.

Next I have Russell -- I'm going to
mispronounce your last name, I'm sure -- Shabash
(phonetic). Russell.

MR. RUSSELL SHABAIASH: Right here.

FACILITATOR: And name and spelling
and correct pronunciation for the court reporter as
well. Thank you.

MR. RUSSELL SHABAIASH: My name is
Russ Shabaiash. I'm an elder and a dancer. I dance
for the kids so they don't get sick; young women,
young men that don't get sick. This is one of my
dreams, one of my visions that came to me. After I
sun dance with peers, everything was for the
(speaking Ojibwe), the baby, the (speaking Ojibwe),
the boys and girls.

We are all together as one. We don't

have our babies at the baby-sitter, the kids at the movie hall, youngsters at the dance, the mom and dad all that they're doing and they leave the little baby, the old man at home or in an old folks home that's like this.

Native people, we're always together.
We're like this (indicating). We're one. We're not
spread apart like society is today.

I want to tell you my name, (speaking Ojibwe). I'm from Mille Lacs. My spirit is ice bear. My name, Sandy, my native name. And all this stuff we want to hear about, it all started back in 1492 when that boat came and started digging up everything, bones, lives that were lost years before that.

And you tried to say we're going to do this for you because it's in the best interests of you. We don't see no interest. We don't see the best in it. If any of them are dark -- look at thousands, thousands of our relatives. It could be an ant, it could be an spider, all of them are life. They help us. All these animals out in the woods help us.

We want a deer, we want a large (speaking Ojibwe) for our family, we don't just go

out and shoot it. We put out the (speaking Ojibwe).

We ask that of (speaking Ojibwe) if we could have
his body to feed our family. When we put out

(speaking Ojibwe), these are the things that happen.

24

25

We are traditional people. We don't know anything about what happened at the 1492. We're still trying to fight terrorism that came in 1492. So these things that you have, you want to build pipeline, you want to do this and do that, think of all of the things that you're killing, mass (Speaking Ojibwe), the ones that crawl. murder. (Speaking Ojibwe) our finned relatives. (Speaking Ojibwe), our four-legged. (Speaking Ojibwe), our winged relatives. (Speaking Ojibwe), the trees that grow around you, that's life. (Speaking Ojibwe), water, we have to protect our water. (Speaking Ojibwe), we need that purified, everything that we drop to fight pollution.

So we have an interest in this, a big interest I would say. Since 1492 we've had an interest. (Speaking Ojibwe.)

FACILITATOR: Thank you, Russell.

And, Russell, if you could spell your name just for the court reporter. Is that okay? Thank you so much. Thank you, sir.

	33
1	MR. RUSSELL SHABAIASH: My last name
2	is spelled S, as in sand, H-A-B-A-I-A-S-H.
3	Shabaiash.
4	FACILITATOR: Thank you.
5	Toni Moore. Toni? Toni is right back
6	there. Okay.
7	And just name and spelling for the
8	record, please.
9	MS. TONI MOORE: Toni, T-O-N-I.
10	Moore, M-O-O-R-E. And I don't have a lot to say. I
11	agree with so much everybody has said. But I do
12	have to ask where is the oil coming from? Are we
13	fracking to get this oil? Because if it takes three
14	gallons of water to get a gallon of oil, I can't
15	drink oil, and I'd rather have my energy than a
16	car's energy.
17	Thank you. That's it.
18	FACILITATOR: Winona LaDuke? Winona.
19	There she is. Okay. Good.
20	Eric will bring you the mic, and then
21	name and spelling for the record.
22	MS. WINONA LADUKE: (Speaking Ojibwe.)
23	White Earth Reservation is where I'm from.
24	Executive director of Honor the Earth. Been to a
25	lot of these hearings like Sandy, huh? And I don't

really -- I mean, basically no means no is what I want to say.

So first thing I'm trying to understand is the timetable that we are looking at is accommodating basically the request of a Canadian pipeline company.

We're asked to look at 5,000 pages in a month. A lot of the information is entirely incomplete, like the spill analysis, that's not complete. An explanation of why native people should bear the brunt of this, and then the determination in the EIS that says mitigation pretty much might work out for you. That's pretty incomplete.

Questions about where the oil come from -- that lady just asked that -- it comes from the tar sands. So this feather was given to me by the Dene people from the tar sands, and they asked me to remember them. And they understood that what we were doing here meant a lot to them because they can't drink their water. Their lakes are poisoned. Their people are dying from bile duct cancers.

Cancers that nobody ever heard of up there. Their whole villages are sick, and all around them there is pollution. And so they really want to know, you

know, why that's supposed to work out like that for them?

So the impact of this oil ecologically is huge. The social impact of this oil is not addressed in the EIS. It is unethical to destroy an area the size of Florida to stuff it in a pipe for the benefit of a Canadian pipeline company.

assessment needs to begin at the beginning, with the people who are dying in the ecosystem that is being destroyed for this oil. And then it needs to go all the way down pipe, all those Ho-Chunk people who Enbridge already went over their sacred mounds once and wants to take another 80 feet or 200 feet, cut into more of their sacred mounds. All those people in Detroit who can't breathe, who live next to the Marathon refinery, they don't think it's okay. And I wonder why that full cost accounting -- that's what it is called -- is not included in the EIS. Full cost accounting; I'm going to count. I'm an economist, that's what I was trained as.

So then I have to ask some of the questions that other people are asking. Where are you here? You know, a lot of you may never have been here before. I've been here. I come from a

village that is not unlike this. I come from the White Earth Reservation, and the other tribal community that is most affected is Rice Lake. Now, let me just tell you last week on my reservation we had two suicides. One person drank themself to death and another person died of cancer. Small communities. That's across the board of any of these communities. We're under a huge amount of duress already. We're already in rough shape. The water in Rice Lake is barely drinkable.

and if you all pay attention when you walk in here, you'll see a set of signs that say they need housing, there's a food shelf, chemical dependency, violence against women, violence against elders, foster care, suicides and, again, water testing. That's what it says when you come in here. There's a bulletin board that's full of those signs. So that would mean that this community is under a lot of duress already. The EIS clearly says that we will expect more stress and more duress. So how are we supposed to work that out?

This is a community like my community of survivors. We made it through somehow. We made it through all our people dying on the way to Sandy Lake, where at Sandy Lake 400 people buried up

there. We made it through the glaucoma. We made it through the TB. We made it through the poverty. made it through the relocation program, and we're still here. And now you're asking us to swallow this one and try to deal with it. That's really unfair, Minnesota. That's really unfair. And I'm trying to understand what the difference is between this and Standing Rock, quite frankly. Now, what I know is we fought the Sandpiper, and that's the reason that that did not go ahead. It did not go But what I think is that Enbridge purchased ahead. 28 percent of the Dakota Access Pipeline and instead we understand to Standing Rock.

14

15

16

17

18

19

20

21

22

23

24

25

And when the dogs are put on our people by Dakota Access Pipeline, security, and we were bitten by security forces and when 1,200 police came out there and they shot rubber bullets at us and when they maced us and when they shot water cannons at us and our people stood, a lot of people here were there. NonIndian people and tribal people were there. We were all there. And what happened is that I called Enbridge, because Enbridge has had a set of people to talk to, Linda Coady. I called her, their sustainability director out of Calgary, and I said you need to stop that; if Enbridge wants

to pretend like it is a good citizen, you need to quit sending dogs after us, you need to quit shooting rubber bullets at us, you need to quit macing us, you need to quit pouring water cannons on us, you need to quit arresting us. 840 people were arrested, because we ain't going to forget that, and Enbridge did nothing.

Enbridge had an opportunity to stop of violence in North Dakota. So I'm going to tell you, frankly, I'm pretty stressed out by what I just saw Enbridge do in North Dakota. This is not Morton County. This is not North Dakota. We have no oil interests here; what we have is a lot of risk.

So I'm really concerned about why I'm asked to be -- review a proposal or an EIS 5,000 pages, short set of comments, good luck to you all. It's really unfair and unjust. And Minnesota needs to stand up for its people. It needs to stand up for its water, because we have that, and we don't have the oil interests.

FACILITATOR: It's been about six minutes.

MS. WINONA LADUKE: And then I just want to say a couple other quick things. Enbridge somehow -- and the EIS says it's \$120 billion to

clean up Line 3. I want to know where that math came from. I want to know -- I understand that that's super expensive for Enbridge. That's a lot of jobs, though. Man, that's a lot of jobs in cleaning up a big mess like that. You got to clean up your old mess before you make a new mess. That's what I tell my kids.

23

24

25

But I just want to say one thing on that. If it's so high for Enbridge, that 120 billion, how are we supposed to be expected to pay for it? That would be of the five lines they've got up there that they're going to want to abandon and throw down here. Precedent-setting time. Time to stand up, Minnesota.

FACILITATOR: Been about seven minutes.

MS. WINONA LADUKE: Yeah. I just want to thank you, you know, everybody for coming out. just want to say that the earlier hearing today was at Hinckley, and it made me think of them fires they Remember that? Everybody here remembers had there. Remember the Fort McMurray fire they had last that. year in the middle of tar sands? \$9 billion. Climate change makes fire. So think about it. This is our chance to stop something bad from happening

and do the right thing. Thank you.

FACILITATOR: Thank you.

I have Ken. I'm going to -- Ken Gray?

Ken? Ken, want to raise your hand? Okay. Great,

we'll bring you the mic, sir. Eric is going to come

around to you.

Just name and spelling for the record. Thank you.

MR. KEN VRAA: Ken Vraa. And Vraa is spelled V, like in Victor, R-A-A.

In regards to the EIS on page 19, there's a short section on groundwater. I'm hopeful that the full document addresses groundwater a little bit more thoroughly. This seems to be very short.

What I'm concerned about is the people in this area in this county have a lot of shallow wells, sand point wells, and I'm concerned that any proposed construction activity will disrupt those groundwater to those people and these wells. And I'm not so certain that the EIS, at least from the executive summary, addresses that thoroughly. So I'm hopeful that it does and that my time here is just being wasted. But I certainly would hope that you would take a good look at those flows in terms

1	of are the flows being disruptive, both
2	qualitatively and quantitatively, to those wells
3	that people use.
4	Thank you.
5	FACILITATOR: Thank you.
6	I have Michaa Aubid. Great.
7	We'll bring you the mic, and name,
8	pronunciation, and spelling for the court reporter.
9	Thank you.
10	MR. MICHAA AUBID: Hello. Boozhoo.
11	That's Michaa, M-I-C-H-A-A. Aubid, A-U-B-I-D.
12	I guess I just want to start by saying
13	Miigwech for everyone for coming here to East Lake.
14	I guess the bathrooms looked a little
15	bit out of order. So I guess in the setting up
16	here, the meeting, you know, that was a bit
17	overlooked. But I'm glad everybody was able to come
18	here today.
19	The local Indian people here, you
20	know, have made a lot of their points clear. And
21	usually, you know, it's pretty understood, as
22	someone said, you know, no means no, way back to
23	when these Sandpiper meetings started there in
24	McGregor, maybe a couple years back now.
25	But, you know, for us just

highlighting it again -- you know, from the north there at Sandy Lake down here to East Lake, you know, the Indian people here are scattered throughout our reservation here. And, you know, this proposed Line 3, you know, cuts it right in half. You know, literally right there south of the flowage and across the Sandy River down here to Sheriff Lake, between Little Sheriff and Big Sheriff Lake. So, you know, all of those reasons, you know, and plus what all the people here have been saying about the wild rice and the water, you know, I want to highlight those just a little bit.

But what I also want to talk about is what someone was mentioning, risk. Now, I confess I haven't been able to read the entire impact statement. But on the areas that I have, you know, been able to brief myself on, you know, it seems terribly inadequate for the people here of Aitkin County who are bearing the brunt of this risk that someone talked about.

So, you know, when I was looking into it, you know, so what is in it for us here as members of Aitkin County? And they said, well, it's \$20 million, you know. So I thought there a little bit; and, you know, \$2 million a year for ten years

on the property taxes. So that's kind of the pitch that's been pushed out there. And, you know, to me just, you know, an average person here living in the county, you know, that seems like a pretty, you know, lowball price, you know, on what the risks are. The cleanup costs, not to mention the stigma of our great county here being known as, you know, the pipeline capitol of the world there with, you know, Line 3, one of the biggest pipelines in North America. I'm not too sure of the exact statistics. But it must be one of bigger ones.

So we go from, you know, the Land of 10,000 Lakes here in Minnesota, especially in Aitkin County, all of our beloved lakes, to the world's biggest pipeline. You know, to me that's not a very good attraction to bring people to our beloved county.

Now, the other thing I just wanted to address here, as I check the time timer there, is that, you know, in the newspapers we heard here that Enbridge was suing some of these counties up in northern Minnesota to get some money back that they had been, you know, paid.

So we're going to get \$20 million over ten years here for the county, which, you know,

\$20 million would be a good thing for the county.

But, you know, how do we know they're not going to

come back years later and say, well, hey, somewhere

there was some kind of accounting error there; we're

going to come back there on some of that money.

1

2

3

4

12

13

14

15

16

17

18

19

20

21

22

23

24

25

Now if we look at what's happening to the people who are living up on Line 3 right now, they're saying, well, you know, back when you guys put it in, I guess we didn't think about you guys just taking off and leaving it here.

I really had to laugh at that line there from Winona there where she told her kids, you know, clean up after themselves when they leave You know, really, you know, that was a their mess. powerful statement there because, you know, so they're going to leave that one and come down and put one here, and eventually this become the new corridor, you know, where all of them are going to run through. And then when inevitably, you know, oil becomes, you know, off on the side, as we're changing over to new things, they're going to abandon the pipelines here then. So then we're going to be the people dealing with the abandoned pipeline in the future.

So, you know, and that integrity of

the pipe, issue that that steel worker brought up, you know, that was pretty interesting to me. That was new. So I'm glad to come here to listen to all you people and all of the opinions and thoughts and research that you all have put into this issue here.

You know, so all of these factors here for me, you know, besides, you know, like they said, this long litany of issues that the Indian people here continue to bring up, to me, you know, it just doesn't seem worth it, especially to the Indian people; but, you know, as a citizen of the county and a citizen of Minnesota.

Miigwech. Thank you.

FACILITATOR: Thank you.

John Cirilli? John? And Eric will bring you the mic. He's right behind you.

Just name and spelling for the record.

MR. JOHN CIRILLI: John Cirilli.

J-O-H-N. C-I-R-I-L-I. I came here tonight to argue for what I think of as the actual replacement plan; go in, take out the old Line 3, put in a new one. And I had some really good stuff to argue for; not just a bigger project, more jobs created, more money from the southeast in Minnesota. But instead of building by pristine lakes, rivers, wetlands,

aquifers, building on land that's already ruined, thanks to decades of oil spills, useless for any other purpose.

at Honor the Earth and tried to get them on board, and I didn't convince them. They convinced me.

They reminded me that any pipeline is going to go through somebody's home. It's going to be carrying tar sands petroleum that should never, ever, ever be coming out of the ground.

And there isn't a civilized option here. There isn't a civilized pipeline. The best version of this is the lesser of two evils when, by definition, nothing actually good is going to happen. And we all know how much we like that kind of choice.

And they also told me something I didn't know before; that not only is the proposed pipeline not necessary for the demand for moving petroleum, that the CEO of Enbridge has actually said, Enbridge has to move away from the fossil fuel business. It's coming to an end.

So basically this is just trying to get the biggest possible bite of the pie before it hits its expiration day, which is kind of like

rushing to Africa to shoot the last elephant before someone else does. It's selfish and small, and in the end everybody loses. It's like in the movie War Games, the game of global thermal nuclear war; the only way to win is not to play.

And it might be easy to say, well, if we don't go for that oil, someone else will. Just like we could say, well, if I don't kill that elephant, someone else will. But that isn't true. It doesn't have to be true. Whether or not it's true is a matter of what each of us chooses to do, what we all choose to do.

And, frankly, given all the terrible things that can go wrong with a pipeline, and bottom line the devastation of the climate that's going to happen if nothing goes wrong with the pipeline, the only way to win is not to play. We Minnesotans, government agencies, hard-working Americans who need work, and Enbridge, we all need to start playing a better game.

That's it.

FACILITATOR: Tonia Aubid. Tonia.
We'll bring -- Leslie will bring you the mic.

Name and spelling for the reporter.

25 Thank you.

MS. TONIA AUBID: Boozhoo. (Speaking Ojibwe.) My English name is Tania Aubid.

T-A-N-I-A. Last name A-U-B-I-D. I want to thank everybody for coming out here tonight.

I have a question -- a few questions here or something that I would like to bring up.

What will happen to the -- what will happen to the landowners who have already accepted monetary gains for their lands? Will they be asked to return the cash when this Line 3 replacement will not be done? Will the land be returned to the native people?

That is my question for you.

education is that these lands, once the person or the landowners give these lands up, that these lands automatically go back to the Native American people. Just like these leases that have gone -- that have gone on -- or not on, but had been -- their times have gone up from them. Those lands should have been gone back to the native people.

That's my question for you, Minnesota, is will the landowners, who've already accepted monetary gains for these lines, will they be expected to pay that back? I'm not asking just for Native Americans, but for all landowners, because

they have accepted that money. And what are we going to do? Are we going to be expected to pay that back, even though they put us through all this degradation and mental stress? And I'm sure many of you understand that.

Back in 18 -- or 9 -- not 1850s, but the 1950s when they first put in the Enbridge line, from our chiefs back then, they told us that there was only going to be an 18-inch pipeline that were going to be put through here; no bigger and no less. What happened to that?

Minnesota, are we going to be -- are we going to -- are we going to go back on these original plans of having the 18-inch lines put in?
Why the 750-foot-wide corridor that they want to put through there? How big are those pipes now? I know that we probably could fit maybe a family in there in just one segment of the pipelines, from what I have seen of that Dakota Access Standing Rock.

I was on a 28-day hunger strike, fast.

And I'm glad that you pipeline workers are here,

because I want a guarantee from you that these pipes

will not leak. I'm sure that you're very

professional in the installation of those, but I

want a guarantee from you that these pipelines will

not leak.

1

16

17

18

19

20

21

22

23

24

25

I want to know what the integrity of the pig system is, their safety -- safety protocols are on these lines. I know at 90-degree turns -like from some of these pictures on the map here, Enbridge has told me that they will not be able to put in a -- put in a pig system at those 90-degrees places. And just right over here on the sample land, they have one of those that are going around that piece of property, and there's a 90-degree turn there where they will not be able to put a pig system in. Pig system is going to be able to let us know when there's a leak. Like they told us, it could take anywhere from three hours to three days to check that oil -- oil leak. But then, again, it could be anomaly in their eyes.

So I would like to have information -more information about the integrity system of the
pig -- of the pig system that they want to put in
place.

Also, a reminder to you, although this may not be what they claim to be a legal -- legal item, it's the Declaration of the Indigenous Rights.

The Declaration of Indigenous Rights was spelled out a long time ago, even before we were here. And

those are the words from the creator to be able to take care of these lands. In the Declaration of Indigenous Rights it is spelled out from the memories of our ancestors of what we are to protect here on this planet, on these lands.

Since 1492 -- I can actually say that my family has been here for more than 10,000 years. And those words that we have lived by through that Declaration of Indigenous Rights, the government wanted us to spell out what we believe in our heritage, what we go by, what our rules are.

When I was out on Standing Rock, I understood and I see what those pipeline workers did in order to maintain their integrity on the line to be able to get that pipeline through. I faced them, and it was not a pretty sight. And I'm happy that our sheriff here -- Turner is here, because I too have those same fears about this turning into another Standing Rock. And I'm sure none of you would want that, especially our veterans who have been out there on the front lines facing those things, facing those people, and understanding that you're out there to protect that corporation to put those pipelines through, to ship the oil out of our country and nothing to gain from it.

1	We can take a look at climate change;
2	but if we took a look at mother earth, she's already
3	speaking volumes through volcanic eruptions
4	FACILITATOR: Tonia, it's been about
5	six minutes.
6	MS. TONIA AUBID: earthquakes and
7	just by the climate change itself.
8	These are the questions that I would
9	like to see have answered in the final EIS.
10	Thank you and Miigwech.
11	FACILITATOR: Thank you.
12	So I have two other names and, again,
13	I read earlier. Is there a Harry Hutchins? Okay.
14	And, again, I'm not sure if I'm pronouncing it
15	right.
16	I think it's Kaavaak or Dale Green
17	something. I'm not for sure I have it right. Is
18	that gentleman here? Okay. Our elder already spoke
19	as we started. So thank you.
20	So is there we have a little bit of
21	time left. So is there anyone else who would like
22	to make a public comment? I just want to see hands
23	raised, and then I can call on folks. We've got
24	two.
25	Okay. Why don't we go here and then

here? And if you can stand up and just say your name and spelling for the record. Thank you.

MS. NATALIE BOYD: Hello. My name is Natalie Boyd. N-A-T-A-L-I-E. B-O-Y-D. I guess I have a few things I wanted to say.

Environmental Impact Statement. This is an economic impact statement. The Department of Commerce, like Enbridge, is interested in the monetary impact of this pipeline. When they discuss the negative and the positive impact, it's in the context of dollars. How much revenue and employment revenue will this pipeline bring to our economy? And, conversely, how much monetary costs would there be in the event of an accidental release.

The concern is couched in environmental terms, but it's not actually about how it would affect our health or the health of our environment. So I just want to just make a point to say that the term Environmental Impact Statement is a misnomer.

I also just wanted to ask a question of whether or not the pipeline will be the direct responsibility and liability of Enbridge or if there's going to be any subsidiary limited liability

company that's going to own the pipeline? Because, if so -- and if so, will that subsidiary company have the resources to deal with it when the pipeline fails? Because this was not the case in most of the things that happened in North Dakota. When there was a failure, when there was a problem, it was a shell corporation basically, and they just went bankrupt and people, the taxpayers, had to deal with it and it was a problem.

I will say that the alternatives that we're shown in the statement aren't really alternatives that are viable. And, you know, a lot of people say, well, it's good that you could maybe go somewhere where it's not in our pristine lakes and rivers. But it's not -- that's not really an option either, because it's passing over aquifers. When you go further south, you're going over aquifers that are really, really important to everybody else.

So as an indigenous person from here and a Mille Lacs Band member, I demand to see more exploration of a no-build option. I demand to hear about not pursuing any expansion.

At previous meetings I've spoken about how I believe there's no need for any new fossil

fuel infrastructure. I know a lot of people have talked about that tonight. Enbridge clearly feels otherwise, and they reported that in the EIS. I don't know how we're verifying this information, this plan that they have that there's a demand for oil when everything indicates there's not.

The EIS admits that tribal communities have been disproportionately affected in negative ways by industrial developments, but it claims it can't quantify or determine a better alternative to deal with the harm that will come from this project. And, actually, for once I agree.

There is so much hurt that's going to come from this, and there is no better option. If they do this, they will hurt us. Our -- this project would irrevocably harm tribal communities, whether it's new construction on tribal land or somewhere else.

Dakota Access Pipeline. They took place in another state; but as a lot of people here can tell you, we all felt the trauma. I felt the trauma. Before I even went there, I felt the trauma. And I did go there, and I wasn't even on the frontline. I was just there to support people. And I have trauma.

And --1 FACILITATOR: It's been about five 2 3 minutes. MS. NATALIE BOYD: If you need to 4 5 witness trauma closer to home, go to Hibbing and go to Hull-Rust Mine and overlook the mine there and 6 7 see the scars that we put there; the wounds are 8 there; and know that it's the same industry. 9 the same mineral extraction industry. And if something -- when something happens, the rest of our 10 11 state is going to look like it. It's all the same 12 industry and the same trauma. It's the same crimes against the earth, and there's continued acts of 13 genocide and violence in its native communities. 14 15 You cannot dismiss these issues the way that they have been dismissed in this EIS. 16 17 Thank you. 18 FACILITATOR: Thank you. 19 Eric, we have one more comment right Just name and spelling -- right behind you, 20 here. 21 Eric. 22 Name and spelling for the record, 23 please. 24 MR. DAVID BARNETT: Good evening. Мy

I'm here, I

name is David Barnett, B-A-R-N-E-T-T.

25

represent the pipeline, welders, and fitters and helpers that have been given this project to construct it, if and when it receives its permit.

I represent the welders on a national basis for the United Association of Plumbers and Pipefitters. I take a little bit of offense to the term in the EIS on temporary jobs. These are segments of careers for these individuals. They're good-paying jobs. They run around the country and build pipelines, moving energy for the United States, as we all need and use energy.

The question was asked could I guarantee or we guarantee there would not be a leak. There's no way I could make that guarantee, nor can anyone in this room guarantee me when we're not going to need oil, because we use it every day in 6,000 products and transportation.

These temporary jobs, just to give you an idea, I'm on my 57th employer in my career,

30 years in the field, 11 years representing our workers. And those 57 different pipeline projects, union, all union, fed my family very well and made my career. And they're very important to a lot of individuals out there right now making their living for an honest day's work for an honest day's pay.

Just to let you know, this year the fifth generation of my family began building -- constructing pipelines. So when you say -- you know, I hear, you know, what are you going to tell your grandchildren. My grandfather started this deal. My great-nephew started this year. So there's a lot of history with pipeliners too, and especially union pipeliners.

We do quality work. We drug test on every job we go on. Our welders have to test to prove their skill sets every day. Every weld they make is 100 percent x-rayed. If they make bad ones, they go down the road. That's just the way it is. It's a tough life, but it's a life they've chosen.

I know that if you're going to have a pipeline, the best pipeline to have is a new This pipeline is designed with dense pipeline. steel, X70. They're going to weld it with a wire The coatings are process which is state of the art. better than they've ever been. And it will be hydrostatic tested at a pressure much higher than it will ever operate. That's more than we can say about 50 percent of the pipelines around this country today, because they were grandfathered in and there's no maximum allowable operating pressure

that's ever been tested. The new pipelines have one.

And this pipeline, if it's approved, will be built by, as I said, union members.

Enbridge has promised to build this with union construction workers, many in Minnesota. Many of my members live in Minnesota. So because I have an accent and I'm not from here, I merely represent them on a national basis. A lot of our members here in Minnesota will reap the benefits of these jobs.

And, as I said, if you're going to have a pipeline, no matter what you're carrying through it, the best pipeline to have is a new pipeline.

Think about the day that we never have to face the fact that because of oil -- what oil does for us in our communities, you pick the phone up, you call an ambulance for a loved one, you never think about the fact that fossil fuels brought that ambulance to your door to take care of that individual. It saves a lot of lives. We always talk about what it costs, but there's a lot of benefits to it as well. And I think to have a balanced conversation, you have to look at both.

My first project was the Trans Alaska

Pipeline. We heard a lot of the same arguments before that pipeline was built. It's transported products for 40 years safely, and that environment is still pristine. You have a pristine environment here. I value your water. Water is life. That's why I want products transported through new pipelines and replace the old ones.

Thank you.

FACILITATOR: Thank you.

So we have just a few minutes left.

So anyone who hasn't commented who would like to
make a comment? So Leslie will bring the mic to the
gentleman in the cap right there.

And just name and spelling for the record. Thank you.

MR. WILLIAM REED: My name is William Reed, R-E-E-D.

You know, this isn't a question of whether it's going to be a good pipeline and whether we need oil or not. Sure, we need oil. Whether they make things out of oil. Of course, they do.

It's a question of where we put this pipeline. And employment can be had wherever the pipeline is eventually put, just as it can here.

This area is the epicenter of the

Ojibwe nation. They have been -- Native Americans in general have been pushed around for hundreds of years, and one of the most notable in recent is the 1850 tragedy here at Big Sandy. And they just keep getting pushed around; and they try to go through their reservations, whether it's out in the Dakotas or here.

And for clear representation here, I'm part Anishinaabe, but I'm mostly European. And we owe them some kind of deference in getting this pipeline out of the wild rice country, the lake country that these people have enjoyed as best they could for hundreds of years. We owe them that, and we owe it to ourselves too.

I've been coming up here 66 years. I love this country. The day after I retired,

December 31st, 2003, I was on an airplane coming up here to find a place to live. I just think this is the greatest country in the world. If I get to come around again, I want to be born here. City kids are deprived.

But back to the important part, we need to consider the area we're going through with this pipeline and the risks. Pipelines do break.

They leak. Somebody raised the point -- I think two

people raised the point, there have been two leaks in the Dakota pipeline already, and it hasn't even started up.

We need to think about some of the things that were said here by the real stakeholders, the people who have been in this country for hundreds of years, been pushed around and pushed around and pushed around and pushed around, and this is kind of a -- just another insult. You need to put it somewhere where it isn't going to have the impact that it would here.

Thank you.

FACILITATOR: So we have a comment here. Just name and spelling for the record.

MS. OPIDCHEE MUSHKOOUB: (Speaking Ojibwe.) NonIndian people, friends of the refuge and friend of Indian people, my name is Opidchee Mushkooub. That's Mushkooub, M-U-S-H-K-O-O-U-B. And my first name is Opidchee, O-P-I-D-C-H-E-E.

And first off I'd just like to say,
you know, my great-grandfather drank water. I drink
water. My little daughter, she drinks water. And
everyone of you I know, everyone of you in this
room -- not singling out anybody, so don't feel like
I'm discriminating against anybody -- but you woke

up this morning and you drank water. You used the bathroom, you made water.

This water is precious. You see where it comes through; it comes through, and it hits all the major ricing lakes and water tributaries to, you know, this great America here, this great state of Minnesota.

Now they keep telling us, you know, you got to have a new one; you can't use that old one, you got to use a new one. Well, how many more times do we got to have a new one? You know, they say -- 1950, they only last about, you know, two, tree years, you know. And us people here, we know that there's leaks, you know. And if they tell you no, they don't, we have all this stuff here, well, we know they leak, and we know they leak on the tribal land into our ricing lakes.

You know, just this past year, you know, us Indian people, we heard about it from our other relatives who were right there; they said that line was leaking. Nobody did anything about it. They cut everybody off. They said, you can't go there; nobody can go there; you're trespassing, on our own tribal land. How can we be trespassing on our land? That was ours first. We're trying to

protect it for everybody here.

And I hear everybody talking about the water, but nobody said anything about the fish. The fish, the waterfowl, all these birds and, you know, the winged creatures, the fishes -- you know, the fish, everything comes through here through East Lake out there on our refuge, that major migratory All of those things, you know, you've seen path. it, migratory birds, you know, everybody knows about that, all the songbirds, you know. Where's their certificate of need? How is this going to affect, you know, greenhouse emissions? You know, the accidental crude oil releases, nobody's telling us what's happening to them.

You know, we're supposed to be the stewards of this earth. As Minnesotans, stewards.

We're supposed to protect it. Look at that, up by the Boundary Waters all over, this looks like an act of war on our environment, our animals, our people.

And all we see, you know, this EIS statement, yes, we heard some people saying this is an economic statement, and it is. All this is going out. You know, is any of it -- nobody said anything about how it's going to help our state of Minnesota, how is it going to help us, how is it going to help

our waters? What about those birds? What about this migratory bird path? All those walleye, what going to happen then when we can't even go up and here fish.

You see this out on 65, cars sounding like a river, an ocean of people coming up to enjoy this beautiful country. And you want to, you know, replace this? How can you replace that out there? How can you put a price on that? Where is that economic statement? Where is it?

You know, my people are still going to be drinking water, you know, seven generations, three, four generations. My great-nephews are going to be needing water. My great-grandfather drank You know, my children need water. You know, they want to still see walleye, we want to still rice, and we're not even sure -- I don't know if this little girl is going to be able to go out there That little girl over there in toboggan, and rice. is she going to rice? Is she going to be able to go throw her net like her dad and her mom, her grandma?

Everybody's scared of something like Standing Rock going on here. You know, we should be glad that something like that would happen here, that our people would fight for that land, this

water, those fish. You know, because it's not even about the economic estimate, you know. And that's what I see there.

All right. Thank you. Thank you for listening.

FACILITATOR: Thank you.

So we've come to about the end of our session, 9:00. I see your hand up, and I know you made a comment earlier, and maybe you could be very, very brief, because we are coming to an end, and I want to close out on time if we can for the respect of the facility.

So name and spelling for the record.

And keep it brief, if you can, please.

MR. JOHN MUNTER: John Munter from Warba, again. And I feel like a 21st archeologist reading this DEIS document, looking at the 20th Century, because there's so many defects in there, we can't figure out if there's any good water studies in there that aren't paid for by Enbridge, for example. And we don't see good peer review data in there, and comments from professionals of the past have been ignored. And it goes even down to my research. I live up in Warba. We did a study from Rowena to Grand Rapids that we found the pipes from

Line 3 to 4 were actually 30 feet apart and not 10, 15 feet apart, as the DEIS said. There's a vast discrepancy there, for example. So the more you dig, the more you'll find.

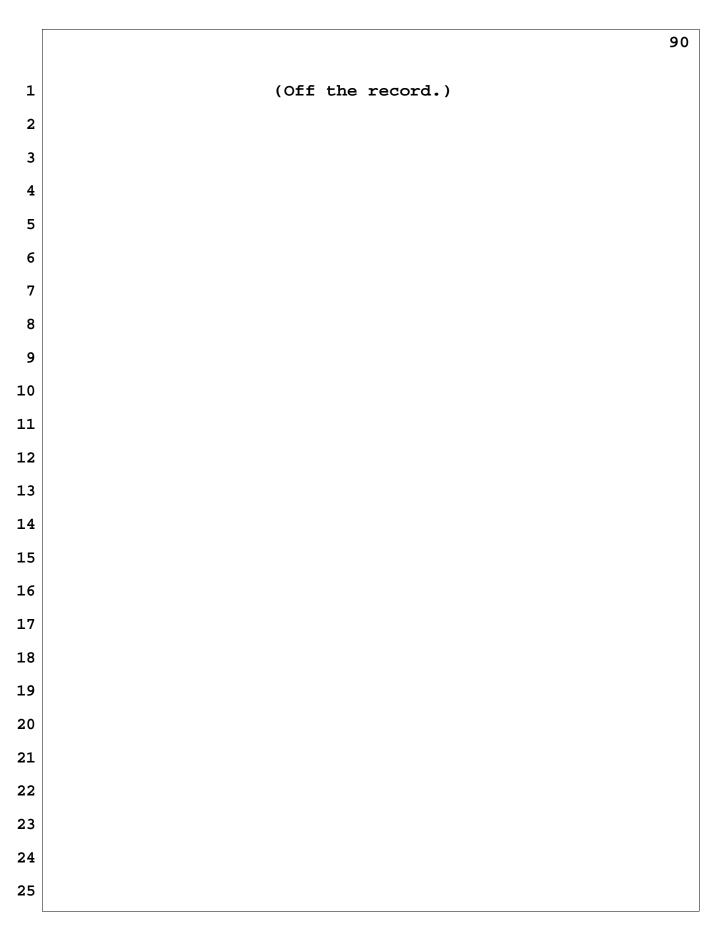

And so this makes the argument -- and to the Department of Commerce's credit, they are looking into that and want to verify my numbers. But this was in 15 named road between Rowena and Grand Rapids. That pipeline can be pulled up. And so that's where people can being employed, is cut up that pipe and put it on trucks and haul it out. And so that's what should be done. So thanks.

FACILITATOR: So just a few reminders as we come to a close, written comments, if you have any additional, can go right into one of these boxes here. You have until July 10th to submit a written comment to the Department of Commerce, either in email or regular old mail. And information in your packet where to send that is actually on that.

We appreciate everyone's comments and thoughts tonight. Appreciate your time and effort. Safe travels home.

And thank you for hosting us for the Band.

Thank you.
